II. n. 1. A foreigner; one born in or belonging to another country who has not acquired citizenship by naturalization; one who is not a denizen, or entitled to the privileges of a citizen. In France a child born of residents who are not citizens is an alien. In the United States, as in Great Britain, children born and remaining within the country, though born of alien parents, are, according to the better opinion, natural-born citizens or subjects; and the children of citizens or subjects, though born in other countries, are generally deemed natural-born citizens or subjects, and if they become resident are entitled to the privileges of resident citizens; but they also may, when of full age, make declaration of alienage. See *citizen*.

When the Roman jurists applied their experience of Roman citizens to dealings between citizens and *aliens*, showing by the difference of their actions that they regarded the circumstances as essentially different, they laid the foundations of that great structure which has guided the social progress of Europe.

(c) An English statute of 1847 (10 and 11 Vict. c. 83) concerning naturalization.—**Alien and sedition laws**, a series of laws adopted by the United States government in 1798, during a controversy with France in regard to which the country was violently agitated. They included three alien acts, the second and most famous of which (1 Stat. 570) conferred power on the President to order out of the country such aliens as he might reasonably suspect of secret machinations against the government or judge dangerous to its peace. It expired by limitation in two years. The sedition law was a stringent net against seditious conspiracy and libel, chiefly aimed at obstructive opposition to the proceedings of government and libelous or seditious publications in regard to them. These laws had little effect besides that of overthrowing the Federal party, which was held responsible for them.

It is one of the organs of the embryo of all amniotic vertebrates, or those which develop an amnion, but is wanting or is at most rudimentary in amphibians and fishes. In birds and reptiles it is large and performs a respiratory function, and in mammals contributes to form the umbilical cord and placenta. Its exterior primitively consists of mesoblast, its cavity receiving the secretion of the primordial kidneys (Wolffian bodies). So much of the sac as remains pervious within the body of the embryo becomes the urinary bladder, or, in some degree, a urinary passage. The umbilical arteries and veins course along the elongated stalk of the sac, which becomes the umbilical cord, and that part of these allantoid vessels within the body which does not remain pervious becomes the urachus and round ligament of the liver. The expanded extremity of the allantois, in most mammals, unites with the chorion to form the placenta. In those vertebrates, as mammals, in which the umbilical vesicle has but a brief period of activity, the allantois chiefly sustains the functions whereby the fetus is nourished by the blood of the mother, and has its own blood arterIALIZED. In parturition, so much of the allantois as is outside the body of the fetus is cast off, the separation taking place at the navel. See *cut* under *amnion*.

F. *allegiance* in this sense is from the E. word.] 1. The tie or obligation of a subject or citizen to his sovereign or government; the duty of fidelity to a king, government, or state. Every citizen owes allegiance to the government under which he is born. *Natural or implied allegiance* is that obligation which one owes to the nation of which he is a natural-born citizen or subject so long as he remains such, and it does not arise from any express promise. *Express allegiance* is that obligation which proceeds from an express promise or oath of fidelity. *Local or temporary allegiance* is due from an alien to the government or state under or in which he resides. In the United States the paramount allegiance of a citizen has been decided to be due to the general government, and not to the government of the particular State in which he is domiciled.

Fidelity is the bond that ties any man to another to whom he undertakes to be faithful; the bond is created by the undertaking and embodied in the oath. Homage is the form that binds the vassal to the lord, whose man he becomes, and of whom he holds the land for which he performs the ceremony on his knees and with his hands in his lord's hands. *Allegiance* is the duty which each man of the nation owes to the head of the nation, whether the man be a land-owner or landless, the vassal of a mesne lord or a lordless man; and *allegiance* is a legal duty to the king, the state, or the nation, whether it be embodied in an oath or not. But although thus distinct in origin, the three obligations had come in the middle ages to have, as regards the king, one effect. *Stubbs*, Const. Hist., § 785.

The conquest of the Danelaw was followed by the earliest instances of those oaths of *allegiance* which mark the

substitution of a personal dependence on the king as lord for the older relation of the freeman to the king of his race.
J. R. Green, Conq. of Eng., v.

It being a certain position in law, that *allegiance* and protection are reciprocal, the one ceasing when the other is withdrawn.
Jefferson, Autobiog., p. 12.

Hence—2. Observance of obligation in general; fidelity to any person or thing; devotion.

Fond shouts and salutations from their mouths,
Even in the presence of the crowned king.
Shak., 1 Hen. IV., iii. 2.

Love, all the faith and all the *allegiance* then.
Pope, Essay on Man, iii. 235.

=Syn. *Allegiance*, *Loyalty*, *Fidelity*. *Allegiance* is the most formal and official of these words; it is a matter of principle, and applies especially to conduct; the *oath of allegiance* covers conduct only. *Loyalty* is a matter of both principle and sentiment, conduct and feeling; it implies enthusiasm and devotion, and hence is most frequently chosen for figurative uses: as, *loyalty* to a lover, husband, family, clan, friends, old traditions, religion. Neither *allegiance* nor *loyalty* is confined to its original meaning of the obligation due from a subject to a prince. *Fidelity* has escaped less completely from this earliest sense, but has a permissible use in the sense of fidelity under obligation of various kinds.

Our people quarrel with obedience;
Swearing *allegiance*, and the love of soul,
To stranger blood, to foreign royalty.
Shak., K. John, v. 1.

A man who could command the unswerving *loyalty* of honest and impulsive Dick Steele could not have been a coward or a backslider.

See *evangelical*.—**Holy Alliance**. See *holy*.—**Syn. Alliance**, *League*, *Confederacy*, *Coalition*, *relationship*, *affinity*, *combination*, *federation*, *copartnership*. The first four words have been used without distinction to express the union or cooperation of two or more persons, organizations, or states. *Alliance* is the most general term. Often a *confederacy* and sometimes a *league* between states means a closer union than an *alliance*. *Alliance* is rarely used of a combination for evil; but the other words are often so used, *confederacy* having specifically such a meaning in law. *Alliance* alone is used of the union of families by marriage. *Coalition* is often used of the temporary cooperation of persons, parties, or states that are ordinarily opposed.

Alliances, at once offensive and defensive, have one of the usual and more important characteristics of confederations.

Woolsey, *Introd. to Inter. Law*, § 103.
We must resolve to incorporate into our plan those ingredients which may be considered as forming the characteristic difference between a *league* and a government; we must extend the authority of the union to the persons of the citizens—the only proper objects of government.

I stood 't the level
Of a full-charg'd confederacy, and give thanks
To you that chok'd it. *Shak.*, *Item*, VIII., i. 2.

The utility of a confederacy, as well to suppress faction, and to guard the internal tranquillity of states, as to increase their external force and security, is in reality not a new idea.

The coalitions of nearly all Europe, which resisted and finally humbled the Grand Monarch, are among the most righteous examples of measures for preserving the balance of power which history records.

Woolsey, *Introd. to Inter. Law*, § 44.

A true American crocodile, *Crocodylus americanus*, long overlooked or confounded with the alligator, has lately been found in Florida and the West Indies. The alligators differ from the true crocodiles in having a shorter and flatter head, cavities or pits

in the upper jaw, into which the long teeth of the under jaw fit, and feet much less webbed. Their habits are less aquatic. They frequent swamps and marshes, and may be seen basking on the dry ground during the day in the heat of the sun. They are most active during the night. The largest of them attain the length of 17 or 18 feet. They live on fish, and sometimes catch hogs on the shore, or dogs which are swimming. In winter they burrow in the mud of swamps and marshes, lying torpid till spring. The female lays a great number of eggs, which are deposited in the sand, and left to be hatched by the heat of the sun. The alligators are distributed over tropical America, but are not known to exist in any other part of the world. Among

Alligatoridae (al'i-gā-tor'i-dē), *n. pl.* [NL., *< Alligator + -idae*.] A family of saurian reptiles, of the order *Crocodylia*, related to the family *Crocodylidae*, and with some authors forming only a subfamily (*Alligatorinae*) of the latter; by most naturalists now judged to be distinct. The typical genus of the family is *Alligator*; other genera are *Caiman* and *Jacare* (which see). According to Huxley's

analysis, the *Alligatoridae* have the head short and broad; the teeth very unequal, the first and fourth of the under jaw biting into pits in the upper jaw; the premaxillo-maxillary suture straight or convex forward; the mandibular symphysis not extending beyond the fifth tooth, the splenial element not entering into it; and the cervical scutes distinct from the tergal. All the living *Alligatoridae* are confined to America. The *Crocodylidae* were supposed to be confined to the old world until the recent discovery of a true crocodile in America. In general appearance and economy the members of the two families are sufficiently similar to be confounded in popular language. Both families belong to the section of the order *Crocodylia* in which the nasal bones enter into the formation of the nasal aperture, the contrary being the case in the section which includes the Gangetic crocodile or gavia, *Gavialis gangeticus*.

Puffs, powders, patches, bibles, billet-doux.

Pope, *R. of the L.*, I. 138.

Verse in which *alliteration* is essential, and other rime ornamental, is the prevailing form in Anglo-Saxon, Icelandic, Old Saxon. Specimens are found in Old High German. *Alliteration* in these languages even ran into prose. *F. A. March*, *A.-S. Gram.*, § 506.

Though the word *alliteration* seems to have been invented by Pontanus in the fifteenth century, the Romans were certainly aware that the device was in use among themselves. *Trans. Amer. Philol. Ass.*, XV. 59.

Alliteration was a characteristic of old Teutonic poetry (Anglo-Saxon and Middle English, Old Saxon, Icelandic, etc.), terminal rime, as a regular feature, being of later (Romance) introduction. The lines were divided into two sections, the first having regularly two alliterating syllables, the second one; but by license or mere accident four or more alliterating syllables might occur, as in the last line of the extract from *Piers Plowman*. The alliterating syllable was always accented, and was not necessarily initial, as written; it might follow an unaccented prefix, as *ar-raye* in the extract. The vowels, being all

more or less open and easy of utterance, might alliterate with one another. In Churchill's line "Apt alliteration's artful aid," given above, the initial vowel-sounds are different (a, a or a, a, i), though spelled with the same letter. The following is an example of Middle English alliteration:

His robe was ful riche of red scarlet encreyned,
With ribanes of red gold and of riche stones;
His arraye me ravysshed: such richesse saw I nevere;
I had wondre what she was and whas ryf she were.

Piers Plowman (B), ll. 15.

Chaucer's verse is cast on the Romance model with final rhyme, but he often uses alliteration as an additional ornament:

The shyveren schafes upon scheeldes thykke;
He feclhe thurgh the herte-spon the prikke.
Up springen speres twenty foot on lighte;
Out foun the swerdes as the silver brighte.
The helmes to-hewen and to-schurde
Out brest the blood, with sterne streames reede,
With mighty maces the bones thy to-brest.
He thurgh the thikkeste of the throng gan threst (etc.).

Chaucer, Knight's Tale, l. 1747.

Such alliteration is much affected by Spenser and his imitators, and occurs with more or less frequency in all modern poetry.

A few verses, like the pleasantly alliterative one in which he [Dryden] makes the spider, "from the silent ambush of his den," "feel far off the trembling of his thread," show that he was beginning to study the niceties of verse. Lowell, Among my Books, 1st ser., p. 40.

= **Syn.** *Allow, Permit, Consent to, Sanction, Suffer, Tolerate.* *Allow* and *permit* are often used synonymously; but *permit* strictly denotes a formal or implied assent; *allow*, the absence of an intent, or even only of an attempt, to

hinder. *Consent to* is formally to permit that which one has the power and generally some disposition to prevent; it implies the assumption of responsibility for that which is thus allowed. *Sanction* has a secondary sense of permitting with expressed or implied approbation: as, I cannot *sanction* such a course. *Suffer* is still more passive or reluctant than *allow*, and may imply that one does not prevent something, though it is contrary to one's feelings, judgment, or sense of right. To *tolerate* is to bear with something unpleasant: as, I would not *tolerate* such impertinence. Many things are *tolerated*, or *suffered*, or even *allowed*, that are not *permitted*, and many are *permitted* that are not really *consented to*, much less *sanctioned*.

When treated with alkalis it produces alloxanic acid. F.) and *alloy*¹.] The sense has been influenced by the erroneous etymology from F. *à loi*: see *alloy*, *n.* **I. trans.** 1. To mix (two or more metals) so as to form a compound, without reference to the relative value of the metals mixed.

When we wish to *alloy* three or more metals, we often experience difficulties, either because one of the metals is more oxidisable, or denser, or more fusible than the others, or because there is no direct affinity between two of the metals. *Cree*, Dict., I. 92.

2. To reduce to a desired standard or quality by mixing with a less valuable metal: as, to *alloy* gold or silver with copper.—3. Figuratively, to debase or reduce in character or condition by

admixture; impair by the intrusion of a base or alien element; contaminate; modify; as, external prosperity *alloyed* by domestic trials.

Formerly written *alloy*.

alloy (a-loi'), *n.* [*< F. aloi*, earlier *aloy*, *< OF. alei*, *AF. aley*, *alay*, *> E. alloy²*, *n.* The sense has been influenced by the erroneous etymology from *F. à loi*, to law, as if 'that which is brought to the legal standard.'] 1. An artificial compound of two or more metals combined while in a state of fusion, as of copper and tin, which form bronze, or of lead and antimony, which form type-metal. The alloys are numerous, as the bronzes, bronzes, solders, type, gun-, and bell-metals, etc., and are of great importance in the practical arts. There are many varieties of these alloys, the character of each being determined by the proportions of its constituents. An artificial metallic mixture containing quicksilver is termed an *amalgam* (which see).

2. An inferior metal mixed with one of greater value. The gold and silver coins of the United States are of the standard fineness of 900 parts of fine metal and 100 parts of copper alloy, of which in the case of gold not more than one tenth may be silver. In the case of silver coins the alloy is wholly of copper. Hence these coins are said to be 900 fine. See *alloyage*.

The British standard for gold coin is 22 parts pure gold and 2 parts *alloy*, and for silver, 222 parts pure silver to 18 parts of *alloy*.

alloyage (a-loi'āj), *n.* [*< alloy + -age*]. The practice or process of alloying metals; specifically, in *minting*, the practice of adding to the precious metals a small proportion of a baser one, to harden them, with the object of producing a clear impression when the coins are struck, and of preventing or lessening abrasion while they are in circulation. See *alloy*, *n.*, 2.

alloy-balance (a-loi'bal'aus), *n.* A balance for weighing metals which are to be combined in decimal proportions. In Robert's alloy-balance the point of suspension is movable, and is adjusted to the point at which the arms of the balance bear to one another the proportion of the metals to be weighed, as for example 17 per cent. of tin to 83 of copper. The beam of the balance is then brought to the position of equilibrium by means of a weight suspended from a continuation of the short arm of the balance; and when the balance is so adjusted any quantity of copper put in the short-arm scale will be balanced by the requisite proportion of tin in the other scale, that is, in the supposed case, 17 per cent. of the total weight of the two.

allozooid (al-ō-zō'oid), *n.* [*< Gr. ἄλλος*, other, + ζοοϊδής, like an animal: see *zooid*]. In *zoöl*, an animal bud or zooid separated by gemmation from the organism by which it is produced, and differing from it in character: the opposite of *isozooid*.

The leaves and flowers resemble those of the peach, but the fruit is more compressed, with a thin, tough, and fibrous deciduous husk when ripe, and the shell thinner and more fragile. The tree is cultivated for its nuts in the region bordering the Mediterranean, in California, and to a limited extent in the southern United States; elsewhere it is grown for ornament, on account of its large early flowers. The common flowering almond is a dwarf double-flowered species from Russia, *P. nana*. The tropical *Terminalia Catappa*, of the East Indies, is also called almond-tree.

almoner¹, **almner** (al'mõn-ēr, äm'nēr), *n.* [Early mod. The office of almoner was first instituted in monasteries and other religious houses, which were required to dispense part of their revenues in charity. Almoners, usually priests, and often acting also as chaplains, were afterward attached to the households of sovereigns, feudal lords, prelates, etc., and to public institutions of various kinds. In France the name early became synonymous with *chaplain*. (See *almonier*.) The grand almoner of the realm was

regularly a cardinal or other high prelate; since the Revolution this post has been alternately restored and abolished. In England there is a *lord almoner*, or *lord high almoner*, an ecclesiastical officer, generally a bishop, who formerly had the forfeiture of all deadlands and the goods of all suicides, which he had to distribute to the poor. He now distributes twice a year the sovereign's bounty, which consists in giving a silver penny each to as many poor persons as the sovereign is years of age. There is also a *sub-almoner*, and a hereditary *grand almoner*. The office of the latter is now almost a sinecure.

They are natives of warm climates of the old world, and are especially abundant in the southern part of Africa. Among the Mohammedans the aloe is a symbolic plant, especially in Egypt, and every one who returns from a pilgrimage to Mecca hangs it over his street-door, as a token that he has performed the journey. In Africa the leaves of some species of aloe are made into ropes, fishing-lines, bow-strings, and hammocks. Several species yield aloes, the well-known bitter purgative medicine. aloes (al'ōz), *n.* sing. or pl. (pl. of *aloc*, used also as sing.). [See *aloc*.] 1. A drug, the inspissated juice of several species of aloe. It is obtained from the leaves, sometimes by cutting them across, when the resinous juice exudes and is evaporated into a firm consistency, sometimes by pressing the juice and mangle out together, and in other cases by dissolving the juice out of the cut leaves by boiling and then evaporating to a proper consistency. Several kinds are known in commerce. Socotrine aloes, also called East Indian or Zanzibar aloes, the produce mainly of varieties of *A. Perryi*, comes chiefly from Red Sea ports and Aden. Barbados and Curaçoa aloes are produced in the West Indies from *A. rubra*, which has been introduced from the Mediterranean. Cape and Natal aloes are obtained probably from *A. ferax*, and form by far the greater part of the supply. The name *hepatic aloes* is applied to any opaque and liver-colored variety of the drug. The extract of aloes when treated with nitric acid gives rise to various yellow and brown products, which by the aid of mordants can be dyed to silk and wool; but they are seldom used in dyeing.

The locality became the resort of libertines and rascals of every description, whose abuses and outrages, and especially the riot in the reign of Charles II., led in 1697 to the abolition of the privilege and the dispersion of the Alsatians. The term *Alsatia* has in recent times been applied offensively to the English Stock Exchange, because of the supposed questionable character of some of its proceedings.

The earliest altars were turf mounds, large flat-topped stones, or other rude elevations, natural or artificial; but when temples came to be built altars were generally made of hewn stone, marble, or metal, and became more and more ornate. Greek and Roman altars were round, triangular, or square in plan, often elaborately adorned with sculpture, and bearing inscriptions. Sometimes, as at Pergamon, the altar was a structure of vast size and complex plan, and was in itself an art monument of the highest importance. In the Jewish worship two altars were used: the altar of burnt-offering, which stood at the entrance to the tabernacle, and afterward occupied a corresponding position in the temple, and the altar of incense, which stood in the holy place. Both were made of shittim-wood, the former being overlaid with brass, the latter with gold.

2. In most Christian churches, the communion-table. In the primitive church it was of wood, subsequently of stone, marble, or bronze, sometimes with rich architectural ornaments, sculptures, and painting. In the Roman Catholic Church the altar is the table, since the early ages of the church either of stone or including a block of stone (the altar-stone), upon which the priest consecrates the eucharist. Lesser or *side altars* often stand in chapels or against the pillars of the nave. See *ent* under *cathedral*.—**Privileged altar**, in the Rom. Cath. Butler, Coptic Churches, II. i. 3-5.*

altar-bread (âl'târ-bred), *n.* Bread prepared for the eucharist. Unleavened bread is required for this purpose in the Roman Catholic Church, and is used in many Anglican churches, in which either leavened or unleavened bread is permitted. In both the latter is made into small thin disks or wafers, called severally *altar-breads*, usually stamped with some emblem, as the cross or crucifix, or I. H. S. In the former church, after consecration, the altar-bread is called *host* (see *host*), and the wafers are of two sizes, the larger for the priest, the smaller for the people. The Greek Church uses leavened bread especially made for the purpose. See *oblate, n., 1.*

It is a general term, and includes the close case of linen which was used in the middle ages and removed only for washing the altar, the later *cover-cloth* (which see), and the temporary coverings, whether of white linen, or of rich stuff, or of embroidery. The different coverings for the altar have different names. See *antependium, frontal, and superfrontal*.

On the continent of Europe they are found in the sacristies of many churches, and are frequently used, carried on either side of the crucifix, at funerals and solemn processions of the blessed sacrament, in those divisions of the church which practise reservation of the holy eucharist. See *Eccles. Terms.*

altar-ledge (âl'târ-lej), *n.* A step or ledge behind the altar of a church and raised slightly above it, to receive ceremonial lights, flowers, or other ornaments or symbols. Sometimes there are two or more steps or ledges. In modern usage often called *retable*, though the retable is more properly higher, and in itself an important architectural or decorative feature. See *retable*. Also termed, but incorrectly, *super-altar*.

altar-light (âl'târ-lit), *n.* A light placed upon or near an altar, and having a symbolical meaning. In the Roman Catholic Church the lights are often set upon the altar itself; in the Church of England they always stand on an altar-ledge behind or beside the altar.

altarpiece (âl'târ-pês), *n.* A decorative screen, retable, or reredos placed behind an altar, considered especially as a work of art. In churches of the Renaissance period it is more usually a painting of a sacred subject, but in those of the early middle ages it is frequently of embossed silver or of rich gold and enameled work set with jewels, as the famous Pala d'oro of St. Mark's in Venice.

As the altar stood free in the choir, and the *altarpiece* was to be seen from behind as well as from before, both sides were to be covered with painting.

altar-protector (âl'târ-prô-tek'tôr), *n.* The name given to a covering of green cloth, baize, or velvet, which, exactly fitting the top of the altar, is placed on it at all times when the altar is not being used, to protect the sacred linen from dust and defilement. See *Eccles. Terms.*

altar-rail (âl'târ-râl), *n.* A low rail or barrier running transversely to the main axis of the church and separating the sanctuary from those portions of the church that are in front of it. Also called *communion-rail*, as communicants kneel at this rail to receive the eucharist.

altar-table (âl'târ-tâ'bl), *n.* 1. In a Christian church, the top or the consecrated portion of an altar; the altar proper, or mensa.—2. A name for one of the wooden tables which were substituted for the old altars in England in the seventeenth century, and used for the communion where the old altars had been destroyed by the Roundheads. At first this table was placed by the reformers against the eastern wall in the position of the old stone altar. This position gave umbrage to the Puritans, who held that it was characteristic of the Church of Rome. Cromwell therefore caused the altar-table to be removed to the middle of the chancel, and to be surrounded with seats for the communicants. At the restoration it was almost universally replaced in its ancient position. When used it is covered with a white linen cloth.

F. *alun* = MHG. *alün*, G. *alain* (> Pol. *alun* (barred l), Sloven. *alun* = Russ. *gabunä* = Lith. *alunas*), < L. *alumen*, alum; of unknown origin.] The general name of a class of double sulphates formed by the union of aluminium, iron, chromium, or manganese sulphate with the sulphate of some other metal, commonly an alkaline metal or ammonium. Common or *potash alum* has the formula $Al_2(SO_4)_3 + K_2SO_4 + 24H_2O$. It is produced by mixing concentrated solutions of potassium sulphate and crude aluminium sulphate. The double salt at once crystallizes in octahedrons. Alum is soluble in water, has a sweetish-sour taste, reddens litmus, and is a powerful astringent. In medicine it is used internally as an astringent, externally as a styptic applied to severed blood-vessels. In the arts it is used as a mordant in dyeing, and extensively in other ways. When mixed in small amount with inferior grades of flour, it is said to whiten them in the process of bread-making, but its effect on the system is injurious.—**Alum shale**, another name for *alum slate*, including especially its more shaly varieties.—**Alum slate**, a variety of clay slate containing more or less carbonaceous material (remains of seaweeds, etc.), with which is associated an easily decomposed and frequently occurring compound of sulphur and iron (marcasite). The decomposition of this substance gives rise to an efflorescence of alum, usually potash alum, which is a compound of potassium sulphate and aluminium sulphate.—**Burnt alum**, alum from which the water of crystallization has been driven off by heat. Also called *dried alum*, *alumen exsiccatum*.—**Concentrated alum**, normal aluminium sulphate, $Al_2(SO_4)_3$, which is prepared on a large scale by treating roasted clay with oil of vitriol, and crystallizing out the sulphate formed. It is largely used in dyeing. Also called *patent alum*.—**Cubic alum**, or **basic alum**, the mineral alum-stone.—**Earth of alum**. See *earth*.—**Roman alum**, a variety of potash alum prepared from the mineral alum-stone, of special value to dyers, since it contains no soluble iron salts. Also called *rock-alum* and *roche-alum*.

alumina (a-lü'mi-nä), *n.* [NL., < L. *alumen* (*alumin-*): see *alum*.] The oxid of aluminium, Al_2O_3 , the most abundant of the earths. It is widely diffused over the globe in the shape of clay, loam, and other similar substances; corundum, in its varieties almandine spar, the ruby, and sapphire, is alumina nearly pure and crystallized. In these forms alumina is, next to the diamond, the hardest substance known. Its great value in the arts depends on its affinity for vegetable coloring matters and animal fiber. It forms the base of the lakes in dyeing, and acts also as a mordant. United with silica it is extensively used in the manufacture of all kinds of pottery and porcelain-ware, crucibles, mortar, and cements.

aluminate (a-lü'mi-nät), *v. t.*: pret. and pp. *aluminated*, ppr. *aluminating*. [*< L. aluminatus*, pp. adj., < *alumen* (*alumin-*): see *alum*.] To treat or impregnate with alum; specifically, in printing engravings, to wash (the paper) with alum-water to prevent the running of the lines.

aluminium (al-ü-min'ü-m), *n.* [NL. (> F. *alumine*, > E. *alumin*), < L. *alumen* (-min-), alum (see *alum*), + *-ium*, as in *sodium*, *potassium*, etc.; first proposed by Davy in the form *aluminum* and then *aluminium*. It was discovered by Wöhler.] Chemical symbol Al; atomic weight 27.1. A metal of silver-white color and brilliant luster, about as hard as zinc, very malleable and ductile, highly sonorous, and a good conductor of heat and electricity. Its most remarkable character is its low specific gravity (2.56), which is about one third that of iron and less than that of marble. It does not tarnish in the air, and even in a molten state does not oxidize; its melting-point is somewhat lower than that of silver. Aluminium in combination with oxygen (Al_2O_3) forms the common earth alumina, which exists in nature as the mineral corundum, of which the ruby, sapphire, and emery are varieties; the hydrated sesquioxide exists as the minerals diaspore, gibbsite, and bauxite. Alumina also enters into the composition of a very large number of minerals, the most important of which are the feldspars. From the decomposition of these, clay (kaolin, etc.) is produced, which is essentially a hydrated silicate of aluminium. Among other important minerals containing aluminium are the silicates andalusite, cyanite, fibrolite, topaz, and all of the zeolites; the fluoride of aluminium and sodium, cryolite, from which the metal is reduced; the oxid of aluminium and magnesium, spinel; the sulphates aluminite, alum-stone, the alums, etc.; the phosphates turquoise, lazulite, etc.; the carbonate dawsonite, and many others. It is estimated that in its various compounds aluminium forms about one twelfth of the crust of the earth. In consequence of its very low specific gravity, freedom from tarnish, non-poisonous qualities, and ease of working, aluminium is a valuable metal. The use of aluminium has extended with the rapid decrease, through improved processes, in the cost of separating it from the combinations in which it occurs in nature. It is used especially for physical apparatus and other articles in which lightness and great strength are necessary. The cap of the Washington monument, which forms the tip of its lightning-rod, is a pyramidal mass of aluminium weighing 100 ounces. Also written *aluminum*.—**Aluminium bronze**, an alloy of 9 parts of copper with 1 of aluminium. It resembles gold in luster and color, and is used as a cheap imitation of that metal. Unlike gold, however, it gradually tarnishes on exposure to the air. It is much used in cheap jewelry and ornamental work, and also for a great variety of industrial purposes, especially for bearings in machinery.—**Aluminium silver**, a

It is the muscle formerly known as the *gracilis* muscle of birds; but its identity with the mammalian *gracilis* is questionable. Most birds, as the entire order *Passeres*, have no *ambiens*. The presence or absence of the muscle has lately been made a basis of the division of birds into two primary series in Garrod's classification, birds having it being termed *Homalognatæ*, those lacking it *Anomalognatæ*. See these words.

The *ambiens* arises from the pelvis about the acetabulum, and passes along the inner side of the thigh; its tendon runs over the convexity of the knee to the outer side, and ends by connecting with the flexor digitorum perforatus. . . . When this arrangement obtains, the result is that when a bird goes to roost, and squats on its perch, the toes automatically clasp the perch by the strain upon the *ambiens* that ensues as soon as the leg is bent upon the thigh, and the tarsus upon the leg, the weight of the bird thus holding it fast upon its perch.

A genus of birds, founded by *Gould* in 1837, but preoccupied in ichthyology by the preceding genus, and therefore not in use. It was based upon a remarkable South American goatsucker, of the family *Caprimulgidæ*, now known as *Eleutheropus anomalus*.

Amblyrhynchus (am-bli-ring'kus), *n.* [NL., < Gr. ἀμβλυός, blunt, + ῥύγχος, snout.] 1. A genus of iguanid lizards characteristic of the Galapagos islands, so called from the very blunt snout. Amblystoma (am-bli-stō-mā), *n.* [NL., < Gr. ἀμβλυός, blunt, dull, + στόμα, mouth.] An extensive genus of urodelo or tailed batrachians, notable for the transformations which they undergo; of the type of the family *Amblystomidæ*. In their undeveloped state they represent the formerly recognized genus *Siredon*, and some species are known as *axolotls*. They belong to the salamandrine series of the *Urodelæ*, and are related to the newts, efts, salamanders, etc. Very often written, by mistake, *Ambystoma*. See cut under *axolotl*.

The axolotl is the larval state of *Amblystoma*; but it sometimes remains in that state throughout life, and is at the same time most prolific, while those which must be supposed to have attained a higher form are utterly sterile, the sexual organs becoming apparently atrophied.

Ambries are still used in Roman Catholic churches as depositories for the consecrated oils. They are sometimes made portable, in the form of a chest or cupboard, which is hung near the altar.

ambres-acet, *n.* See *ambres-acet*.

ambulacra, *n.* Plural of *ambulacrum*.

ambulacral (am-bū-lā'krāl), *a.* [*ambulacrum* + *-al*.] Of or pertaining to an ambulacrum, or to the ambulacra, of an echinoderm.—**Ambulacral face**, **ambulacral aspect**, that surface of an echinoderm which bears the ambulacra; corresponding in a starfish to the oral aspect, that upon which the creature creeps.—**Ambulacral groove**, a furrow which marks the course of an ambulacrum.

[In a starfish] a deep furrow, the *ambulacral groove*, occupies the middle of the oral surface of each ray, and is nearly filled by contractile sucker-like pedicels, . . . apparently arranged in four longitudinal series.

Huxley, *Anat. Invert.*, p. 475.

Ambulacral metameres, the divisions of the body of an echinoderm as marked or determined by the ambulacral system, as the five fingers or rays of a starfish. See extract under *ambulacral vessels* and cut under *Astrophyton*.—**Ambulacral nerve**, a nerve which is in relation with the ambulacra.

When the suckers of an ambulacrum [of a starfish] are . . . cut away, a longitudinal ridge is seen to lie at the bottom of the groove between their bases. This ridge is the *ambulacral nerve*. Followed to the apex of the ray, it ends upon the eye and its tentacle; in the opposite direction, it reaches the oral disk.

Huxley, *Anat. Invert.*, p. 475.

Ambulacral neural canal, a tube of which the ambulacral nerve forms the outer wall.—**Ambulacral ossicle**, one of a double row of small hard pieces which come together in the ambulacral groove, extending from its sides to its middle line. Also called *vertebral ossicle*. See cut under *Asteroidae*.—**Ambulacral plate**, one of those coronal plates of a sea-urchin which are perforated to form part of an ambulacrum. See cut under *ambulacrum*.

In the ordinary Echinus or sea-urchin . . . of these plates there are twenty principal longitudinal series, constituting the great mass of the corona; and ten single plates, which form a ring around its aboral or apical margin. The twenty series of longitudinal plates are disposed in ten double series—five ambulacral and five interambulacral. . . . Each *ambulacral plate* is subdivided by a greater or lesser number of sutures . . . into a corresponding number of minor plates. . . . called *poro-plates*.

Huxley, *Anat. Invert.*, p. 486.

Ambulacral sac, in echinoderms, that portion of the vasoperitoneal sac of the embryo which lays the foundation for the whole system of the ambulacral vessels. See *rasoperitoneal* and *Holothuroidea*.—**Ambulacral system**, the water-vascular system (which see, under *water-vascu-*

lar) of echinoderms.—**Ambulacral vesicle**, a sac situated upon the aboral face of an ambulacral ossicle.—**Ambulacral vessels**, the water-vascular channels of the ambulacra. See cut under *Echinoidea*.

Another marked peculiarity of the Echinoderm type is the general, if not universal, presence of a system of *ambulacral vessels*, consisting of a circular canal around the mouth, whence canals usually arise and follow the middle line of each of the ambulacral metameres.

Huxley, *Anat. Invert.*, p. 54.

Circumoral ambulacral vessel, that into which a radial canal of the ambulacral system of vessels opens at its oral end.—**Radial ambulacral vessels**, those which radiate from the central or circular vessel which surrounds the gullet.

Ambulacraria (am' bŭ-lak-rā' ri-ā), *n.* pl. [NL., < *ambulacrum* + *-aria*.] 1. [*l. e.*] The coronal ambulacra of sea-urchins.

Ambulacrata (am' bŭ-lak-rā' rī-ā), *n.* pl. [NL., neut. pl. of *ambulacratus*, < *ambulacrum*.] A term applied by E. R. Lankester to a branch of echinoderms consisting of the *Holothuroidea*, *Echinoidea*, and *Asteroidae*, or sea-cucumbers, sea-urchins, and starfishes, as collectively distinguished from the erinoids or *Tentaculata* (which see).

ambulacriform (am-bŭ-lak' rī-fōrm), *a.* [*l. ambulacrum* + *forma*, *form*.] Possessing the form or appearance of an ambulacrum.

ambulacrum (am-bŭ-lā'krum), *n.*; pl. *ambulacrā* (-krī). [NL. use of L. *ambulacrum*, a walk,

A, three ambulacral plates of *Echinus sphaera*, showing sutures of the pore-plates of which each ambulacral plate is composed. B, a portion of the extent of the petaloid ambulacrum of a clypeastroid.

alley, < *ambulare*: see *ambulate*.] In *zool.*, a row, series, or other set of perforations in the shell of an echinoderm, as a sea-urchin or starfish, through which are protruded and withdrawn the tube-feet or pedicels. Each such row or set of holes usually forms a narrow grooved line from base to apex of a sea-urchin, and from the center of the end of each ray of a starfish, along the oral aspect of the body. Each set or radiating series of perforations is an ambulacrum, the several rows together being the ambulacra. The usual definition of ambulacra as the perforated spaces through which the tube-feet are protruded leaves a doubt whether an ambulacrum is not one such perforated space. Ambulacra is sometimes used for the tube-feet themselves, collectively; in which case it properly signifies several sets or series of tube-feet, not several tube-feet of any single row or series.

The *ambulacrā* present important variations in the three divisions of the Echinidea. *Huxley*, *Anat. Invert.*, p. 489.

To repair; mend. [Now rare.]—4†. To heal or recover (the sick); cure (a disease). = *Syn.* *Amend*, *improve*, *better*, *Enend*, *Mend*, *Correct*, *Rectify*, *Reform*, *Ameliorate*.

Amend is generally to bring into a more perfect state by the removal of defects: as, to *amend* a record or one's manner of life. *Improve* and *better* are the only words in the list that do not necessarily imply something previously wrong; they may mean the heightening of excellence: as, to *improve* land or one's penmanship. *Better* is also used in the sense of surpass. *Correct* and *rectify* are, by derivation, to make right; they are the most absolute, as denoting the bringing of a thing from an imperfect state into conformity with some standard or rule: as, to *correct* proof; to *rectify* an error in accounts. To *mend* is to repair or restore that which has become impaired: as, to *mend* a shoe, a bridge, etc. Applied to things other than physical, it may be equivalent to *amend*: as, to *mend* one's manners. *Enend* has especially the limited meaning of restoring or attempting to restore the text of books. *Reform* is to form over again for the better, either by returning the thing to its previous state or by bringing it up to a new one; or it may be to remove by reform: as, to *reform* the laws; to *reform* abuses. *Ameliorate* is not commonly applied to persons and things, but to condition and kindred abstractions; it expresses painstaking effort followed by some measure of success: as, to *ameliorate* the condition of the poor.

Its fundamental principle was that the government of the country should be in the hands of native citizens. At first it was organized as a secret, oath-bound fraternity; and from their professions of ignorance in regard to it, its members received the name of Know-nothings. Ignoring the slavery question, it gained control of the governments of several Northern and Southern States in 1854 and 1855, and nominated a presidential ticket in 1856; but it disappeared about 1859, its Northern adherents becoming Republicans, while most of its Southern members joined the short-lived Constitutional Union party. An antislavery party of the same name appeared in 1875, but gained very few votes. See *Native American party*, below.

It gained no further successes, and disappeared within a few years, after occasioning destructive riots against Roman Catholics in Philadelphia and other places.

In Macleay's system of classification, a term borrowed from W. E. Leach to designate a subclass of *Insecta* by which the myriapodous, thysanurous, and anoplurous "insects" should be collectively contrasted with the true insects, which undergo metamorphosis. Myriapods being excluded from the class *Insecta*, and lice being located with insects that are not thoroughly ametabolous, *Ametabola* is by some authors restricted to the collembolous and thysanurous insects. The term is correlated with *Hemimetabola* and with *Metabola*.

M'Leay has formed them [Myriapoda] into two orders, Chilopoda and Chilognatha, raising them, together with the two other orders, Thysanura and Anoplura (or Parasita, Latr.), and certain annulated vermes, into a distinct class, to which he applied the name of *Ametabola*, which Leach had proposed only for the spring-tailed insects and lice. *J. Amen was always represented in human form, and was of a much higher order than the ram-headed divinity, the god of life, worshipped especially at the famous oracular sanctuary of the Libyan oasis of Ammon (now Siwah). The latter type was confused by the Greeks and Romans with that of Amen-Ra, and was adopted by them as Zeus-Ammon or Jupiter-Ammon, but in art was generally idealized so that only the horns, sometimes with the ears, of the ram were retained, springing from a human head.

ammonia (a-mō'ni-ā), *n.* [NL. (Bergmann, 1782), < *L. (sal) ammoniacum*: see *ammiac*.]

1. The modern name of the volatile alkali, NH₃, formerly so called to distinguish it from the more fixed alkalis. It is a colorless gas, very soluble in water, having a pungent and suffocating smell, and a transient alkaline effect on vegetable colors. It can be liquefied by pressure and frozen by a mixture of solid carbonic acid and ether in a vacuum. Its density is only about half that of atmospheric air. It is a strong base, and forms a great number of salts which are isomorphous with those of potassium and exhibit a close analogy to them. It is found in minute quantity in air, and is a natural product of the decay of animal substances. It is procured artificially by the destructive distillation of nitrogenous organic matters, such as bones, hair, horns, and hoofs, and is largely obtained as a by-product in the manufacture of illuminating gas from coal. Ammonia is used very largely in medicine and the arts, chiefly in solution in water under the name of *liquid ammonia*, *aqueous ammonia*, or *spirits of hartshorn*. (See *aqua ammonia*, under *aqua*.) Among the more important salts of ammonia is ammonium chloride, or sal ammoniac, NH₄Cl, which formerly was the source from which all ammonium salts were prepared. It is largely used in dyeing, and in soldering and tinning. At present ammonium sulphate, (NH₄)₂SO₄, is the starting-point for the manufacture of ammonium salts, being made in large quantity from gas-liquor. It is also used as a fertilizer. There are several ammonium carbonates. The commercial article, called *sal volatile*, is a mixture of hydrogen-ammonium carbonate and ammonium carbamate. See *ammonium*.

See etymology, and definitions below.—**2. It has a fetid smell, and a nauseous sweet taste, followed by a bitter one. It is inflammable, and soluble in water and spirit of wine; and it is used as an expectorant, and as a stimulant in certain plasters. The so-called gum ammoniac from Morocco (which is with little doubt the *ammoniacum* of the ancients) is of uncertain origin, but is probably obtained from some species of *Elaeoelinum*. Also called *ammoniac* and *ammoniacum*.—**Sal ammoniac**, ammonium chloride, also called *muriate of ammonia*, a salt of a sharp, acrid taste, much used in the arts and in pharmacy. See *ammonia*, 1.

It contains ammonia, and is used for the manufacture of ammoniacal salts and as a fertilizer.—**Ammoniacal salt**, a salt formed by the union of ammonia with an acid, without the elimination of hydrogen; differing in this from metallic salts, which are formed by the substitution of the metal for the hydrogen of the acid.

ammonium (a-mō'ni-um), *n.* [**NL.** (Berzelius, 1808), **< *ammonia* + *-um***.] A name given to the hypothetical base (NH₄) of ammonia, analogous to a metal, as potassium. It has not been isolated. If mercury at the negative pole of a galvanic battery is placed in contact with a solution of ammonia or ammonium chloride, and the circuit is completed, the mass swells to many times its former volume, and an amalgam is formed which, at the temperature of 70° or 80° F., is of the consistence of butter, but at the freezing-point is a firm and crystallized mass. This amalgam is supposed to be formed by the metallic base ammonium, and is the nearest approach to its isolation. On the cessation of the current the amalgam decomposes into mercury, ammonia, and hydrogen, the two latter escaping as gas in the proportions expressed by their atomic weights, namely, H and NH₃.—**Ammonium bases**, compounds representing one or more molecules of ammonium hydrate, in which monatomic or polyatomic radicals replace the whole or part of the hydrogen, as seen in tetrethyl-ammonium iodide, N(C₂H₅)₄I.

amnion (am'ni-on), *n.*; *pl. amnia* (-ñ). [**NL.**, **< Gr. *ἀμνιον*, the membrane around the fetus (also called *ἀμνιός χιτών*), also the bowl in which the blood of victims was caught at the sacrifices; *ἀμνός*, a lamb: see *agnus*.] 1. In *anat.* and *vertebrate zool.*, one of the fetal appendages; the innermost one of the membranes which envelop the embryo of the higher vertebrates, as mammals, birds, and reptiles; the lining membrane of a shut sac, familiarly called the "bag of waters," in which the fetus is contained.**

An amnion is developed in those vertebrates only which have a fully formed allantois; hence it is absent in the *Ichthyopsida*, or fishes and amphibians, but present in all *Sauropsida*, or reptiles and birds, and in *Mammalia*. The amnion is formed, at a very early period in the life of the embryo, by a duplication of the epiblast, or external blastodermic membrane, which, carrying with it a layer of mesoblast from the somatopleural division of the latter, rises on all sides about the embryo, the folded edges coming together over the back of the embryo, and there coalescing to form a shut sac in which the embryo is inclosed. From this mode of growth, it is obvious that what was the outer side of the amniotic folds becomes the inner side of the sac when it has shut, so that the epiblastic layer is internal, the mesoblastic external; the process of inversion being comparable to that by which, in the case of the primitive trace of the embryo, a layer of epiblast is converted into the lining of the spinal canal. Only that fold of membrane which is next the body of the embryo com-

poses the amnion proper, the other or outer fold in contact with the enveloping primitive chorion (vitelline membrane or yolk-sac) either disappearing or taking part in the formation of the permanent chorion. As long as this outer fold is recognizable as a membrane, it bears the name of *false amnion*. The shut sac of the amnion contains the liquor amnii, a bland, albuminous, serous fluid in which the fetus is immersed. In parturition, rupture of the sac is followed by the "bursting of the waters." Sometimes a portion of the sac adheres to the head of the child, fitting like a skull-cap; such an infant is said, in the language of midwives, who commonly regard the circumstance as a good omen, to be "born with a caul." 2. In *entom.*, a membrane which surrounds the larva of many insects, as the millepeda (*Lulida*), for some time after they are hatched from the egg. It is regarded by some as the analogue of the amnion of a vertebrate.

In many insects and in the higher vertebrates, the embryo acquires a special protective envelope, the *amnion*, which is thrown off at birth. *Huxley*, *Anat. Invert.*, p. 67.

3. A reflected portion of a membrane, in ascidians, which lines the inner wall of the ovisac, and forms a kind of amniotic investment of the embryo.

It is the cavity left between this *amnion* and the inner hemisphere of the blastoderm which becomes the parental blood-sinus. *Huxley*, *Anat. Invert.*, p. 533.

4. In *bot.*, a name formerly given to the fluid contents of the embryo sac.

Sometimes erroneously written *amnios*. **False amnion**, the part of the original amniotic membrane left lining the chorion after the amniotic sac proper is formed by a duplication and inversion of a part of the original membrane. It disappears either by absorption or by taking part in the development of the chorion. Also called *vesicula serosa*.

Amnionata (am-ni-on'ik), *n. pl.* [NL.; prop. **Amniata* or *Amniota*; < *amnion* + *-ata*.] A name given by Haeckel to those vertebrates which have an amnion. ameba (a-mē'bē), *n.*; pl. *amebas*, *amebæ* (-bēz, -bē), [NL.; < Gr. *ἀμοιβή*, change, exchange, < *ἀμειβεῖν*, change, exchange, akin to *L. movere*, > *E. more*, *q. v.*] 1. [*cap.*] A genus of microscopic rhizopodous Protozoa, of which *A. diffluens*, common in all fresh-water ponds and ditches, is the type. It exists as a mass of protoplasm, and moves about and grasps particles of food, etc., by means of pseudopodia, or finger-like processes, which it forms by protruding portions of its body. From this continually altering its shape it received its former name of *protelus animalcule*. Within the body are usually found a nucleus and nucleolus, and certain clear spaces, termed *contractile vesicles*, from their exhibiting rhythmic movements of contraction and dilatation. There is no distinct mouth, and food seized by means of the pseudopodia is engulfed within the soft sarcode-body and by one portion of its surface, the apertures by which the food is taken in closing up immediately after its reception. Reproduction takes place in several ways, but chiefly by fission, whereby an ameba simply divides into two portions, each of which becomes a distinct animalcule. Several other species have been described; but there is reason to think that some of these, at least, may be early forms of other and more complex animals, or even of plants. The term appears to have been first used by Ehrenberg in 1830, as the name of a genus of his *Polygastrica*.

3. Between whites; at intervals; from time to time; now and then.—4. During the time; meanwhile.—**Syn.** *Amid*, *In the midst of*, *Among*, *Between*, *Between*. The *midst* is the middle place; hence *amid* or *in the midst of* should be used where a person or thing is in a position which is, or may be imagined to be, central; they are naturally the expressions between which to choose when the noun is in the singular, or a plural noun stands for that which is virtually one: as, "Lo, I see four men loose, walking *in the midst of* the fire" (Dan. iii. 25); *amid* the waves. By derivation *among* suggests a mingling; it may be properly used with collective nouns: as, he disappeared *among* the crowd. *Between* is nearly equivalent etymologically to *by twain*, so applying only to two; *among* refers to more than two; it is therefore improper to say either *among* them both, or *between* the three. *Between* is the same as *between*.

[L. *cf.* *in zool.*, a name variously used. (a) In the Linnean system (1766), the third class of *Animalia*, including all *Reptilia*, *Batrachia*, and various fishes and fish-like vertebrates. It was divided into three orders: (1) reptiles furnished with feet and breathing by the mouth (*Testudo*, *Draco*, *Lacerta*, *Rana*); (2) footless serpents, also breathing by the mouth (*Crotalus*, *Boa*, *Coluber*, *Anguis*, *Amphisbæna*, *Cæcilia*); (3) finned swimmers (*Nantes pinnati*), breathing by lateral branchia or gills, comprising 14 genera of fishes and fish-like vertebrates, as the *Marsipobranchia* and *Squali*. (b) In Cuvier's system (1817), a tribe of carnivorous animals, intervening between *Carnaria* and *Marsupiatia*, containing the seals and walruses, or pinniped *Carinora*; thus exactly equivalent to the *Pinnipedia* of modern naturalists. Cuvier had earlier (about 1799) placed the *Amphibia* next to the *Cetacea*, both comprising mammals with feet adapted for swimming, as distinguished from those with claws or with hoofs. (c) A class of ichthyopsidian vertebrates, corresponding to the order *Batrachia* of Bronn and Cuvier, containing animals that breathe both in the water and in the air at the same or at different periods of their lives, and have either permanent gills or gills later superseded by lungs, or gills and lungs simultaneously. The gills are usually external. Respiration is also usually effected to some extent by the skin. Limbs are either present or absent, and there are no fins in the adult. The *Amphibia* undergo metamorphosis, the larval forms being more or less fish-like, the adult developing limbs. They are anamniotic and aullantioic, oviparous, and cold-blooded. The heart has two auricles and one ventricle. The skull is dicondylial, with a modified basi-occipital and a parapsphenoid. The *Amphibia* have been very generally called *Batrachia*, after Cuvier; but the latter term is now usually restricted to an order *Batrachia* of the class *Amphibia*. The *Amphibia* include all the animals commonly called frogs, toads, newts, efts, tritons, salamanders, sirens, axolotls, etc. By some they are divided into *Anura* and *Urodela*, the tailless and tailed *Amphibia*. They consist of certain stones, or plants, or of bits of metal, parchment, or paper, with or without mystic characters or words. The gospels and saints' relics have been used in this way. The Mohammedans use diminutive copies of the Koran hung around the neck. From the heathen and the Jews the custom passed into the primitive Christian church, where it was long maintained in spite of the decrees of ecclesiastical councils and the protests of the more intelligent clergy. Amulets of various forms have been found in the catacombs, many of them inscribed with the word ichthys, fish, because this represented the initials of the Greek words for Jesus Christ, Son of God, Saviour. (See ichthys.) They were suspended from the neck or affixed to some part of the body. See phylactery, 3.—Syn. Amulet, Talisman. —Syn. 3. Amuse, Divert, Entertain, Beguile, occupy, please, calive. Amuse may imply merely the prevention of the tedium of idleness or emptiness of mind: as, I can amuse myself by looking out at the window; or it may suggest a stronger interest: as, I was greatly amused by their tricks. Divert is to turn the attention aside, and (in the use considered here) to something light or mirthful. Entertain is to engage and sustain the attention by something of a pleasing and perhaps instructive character, as conversation; hence the general name entertainment for lectures, exhibitions, etc., designed to interest in this way. "Whatever amuses serves to kill time, to lull the faculties and banish reflection; it may be solitary, sedentary, and lifeless: whatever diverts causes mirth and provokes laughter; it will be active, lively, and tumultuous: whatever entertains acts on the senses and awakens the understanding; it must be rational and is mostly social." Crabbe. Beguile is, figuratively, to cheat one out of weariness, of dull time, etc. The word is as often thus applied to the thing as to the person: as, to beguile a weary hour; to beguile one of his cares.

I am careful . . . to amuse you by the account of all I see.

an†, **a** (an, a, or an, ā). [*<* ME. *an*, before a vowel, occasionally before a consonant; *a*, before a consonant (see *a*²); *<* AS. *an*, with the reg. adj. declension in *siug.* and pl. (pl. *āne*, some, certain), and the same word as *ān*, one, its use as an indef. art. being comparatively rare. When so used, it was without emphasis, and became in ME. short in quantity (hence E. short *an*, *a*), while the numeral *ān*, retaining its emphasis and quantity, developed reg. into E. *one*, pronounced on (as in *only*, *at-one*, *at-one*), in mod. times corrupted to *won* and finally to *wun*: see *one*.] The indefinite article. As between the two forms of this word, the general rule is that an be used before an initial vowel-sound of the following word, and a before an initial consonant-sound: thus, *an* eagle, *an* answer, also *an* hour (the *h* being silent); and *a* bird, *a* youth, *a* wonder, also *a* use, *a* eulogy, *a* one (these three words being pronounced as if they began with *y* or *o*). But *an* is still sometimes used before a consonant-sound, especially before the weak consonant *h*; and in written style, and in more formal spoken style, *an* is by many (especially in England) required before the initial *h* of a wholly unaccented syllable, as if such an *h* were altogether silent: thus, *an* hotel, but *a* hostess; *an* historian, but *a* history; *an* hypothesis, but *a* hypothetical. In colloquial speech, and increasingly in writing, *a* is used in all these cases alike. As by its derivation, so also in meaning, *an* or *a* is a weaker or less distinct *one*. (1) In certain phrases, and with certain nouns, it still has nearly the value of *one*: thus, two of *a* trade; they were both of *a* size; *a* hundred, *a* thousand, *a* million. (2) Usually, as the indefinite article proper, it points out, in a loose way, an individual as one of a class containing more of the same kind: thus, give me *a* pint of milk; he ate *a* apple; they built *a* house; we see *a* man; the earth has *a* moon; our sun is *a* fixed star. (3) Hence, before a proper noun, it implies extension of the name or character of the individual to a class: thus, he is *a* Cicero in eloquence; they built up *a* new England in America—that is, a person like Cicero, a country like England. (4) *A* is used, apparently, before a plural noun, if *few* or *many* (now only *great many*, or *good many*) stands between: thus, *a* few apples, *a* great many soldiers; but the plural noun is here historically a genitive partitive dependent on *few*, *many*. (5) It is used distributively, or with the meaning of *each* or *every*, in such phrases as two dollars *a* piece, three times *a* day, five cents *a* ounce; but *a* or *an* is here historically a preposition. See *a*³. *An* or *a* always precedes the noun to which it belongs, and in general also any other adjective word qualifying the same noun; but *what* and *such* come before it: thus, *what* *a* shame! *such* *a* beauty; and so also any adjective preceded by *how*, *or so*, *or as*, *or too*: thus, *how* *a* great a calamity, so rare a case, as good *a* man, too early *a* death. *Many* *a* phrase of peculiar meaning. See *many*.

an² (an, an), *conj.* [A reduced form of *and*, existing from the earliest ME. period, and often then so written; but in mod. literature *an* for *and* copulative is admitted only in representations of dialectal or 'vulgar' speech, and is then usually printed *an*'. In conversation, however, though not in formal speech, the *d* is generally dropped, especially before a word beginning with a consonant, and the vowel may be weakened to the point of vanishing. *An*' for *and*, if, is archaic in literature, and is generally printed *an*, in distinction from *and* copulative.] **I.** Coordinate use: *And*; same as *and*, *A*.

Tennyson, Will Waterproof.

ana². [< Gr. *ana*, prep., at (so much each): see *ana-*.] A word used in medical prescriptions in a distributive sense, as in Greek, to indicate an equal quantity of each: often written *ān*, earlier and more correctly *āa*, where the mark above the first *a*, according to general medieval practice, represented the omission of *n*. See *tildē*.

ana³, *n.* See *anna*¹.

ana-. [< L. *ana-*, < Gr. *ana-*, prefix, *ana*, prep., up, upon, hence along, throughout; distributively, at (so much each) (see *ana*²); in comp., up, upward, throughout, back, again, = Goth. *ana* = AS. *an*, *on*, E. *an*: see *an*³, *an*¹, *on*.] A prefix of Greek origin, meaning up, upon, along, throughout, back, again, etc., as in *anabasis*.

[L. *-ana*, neut. pl. of *-anus*, a common adj. suffix, used, for example, to form adjectives from proper names, as *Ciceronianus*, *Ciceronian*, from *Cicero(n)*, Cicero: see *-an*.] A suffix of Latin origin, in modern use with a euphonic variant, *-iana*, to form collective plurals, as *Scatigerana*, *Johnsoniana*, etc., applied

to a collection of sayings of Scaliger, of Johnson, etc., or of anecdotes or gossip concerning them; also sometimes appended to common nouns, as *boviana* (annals of pugilism); more recently extended to all the literature of a subject, as *Americana*, *Shaksperiana*, etc. Hence sometimes used as an independent word, *ana*. Anabantidæ (an-ā-ban'ti-dē), *n. pl.* [NL., < *Anabas* (*-bant-*) + *-idæ*.] A family of acanthopterygian fishes, typified by the genus *Anabas*, to which various limits have been assigned. (a) After the Cuvierian system of classification, a family characterized by the division of the superior pharyngeals into small irregular lamellæ, more or less numerous, and intercepting cells containing water, which thus flows upon and moistens the gills while the fish is out of water. It includes the ophiocephalids as well as the anabantids proper, the osphromenids, and the helostomids. (b) Among later authors, a family characterized by a compressed oblong body, moderate ctenoid scales, and a superbranchial organ in a cavity accessory to the gill-chamber. It includes the osphromenids and the helostomids as well as the typical anabantids. (c) By Cope the family was limited to *Labryinthici* with the second epipharyngeals suppressed, the first superior branchialials with three laminae, and the second and third developed. Also written *Anabantidæ*, and sometimes *Anabasideæ*. See cut under *Anabas*.

Anabaptist (an-ā-bap'tist), *n.* [< NL. *anabaptista*, < Gr. as if **ἀναβαπτιστής*, < *ἀναβαπτίζω*, rebaptize: see *anabaptism*.] One who believes in rebaptism; specifically, one of a class of Christians who hold baptism in infancy to be invalid, and require adults who have received it to be baptized on joining their communion. The name is best known historically as applied to the followers of Thomas Munzer, a leader of the peasants' war in Germany, who was killed in battle in 1525, and to those of John Matthias and John Bockold, or John of Leyden, who committed great excesses while attempting to establish a socialistic kingdom of New Zion or Mount Zion at Münster in Westphalia, and were defeated in 1535, their leaders being killed and hung up in iron cages, which are still preserved in that city. The name has also been applied to bodies of very different character in other respects, probably always in an opprobrious sense, since believers in the sole validity of adult baptism refuse to regard it as rebaptism in the case of persons who had received the rite in infancy. It is now most frequently used of the Mennonites. See *Mennonite*.

It is now usually rated as an order or a suborder, characterized by the spineless vertical and ventral fins, the latter jugular or thoracic when present, and the air-bladder, if developed, with no pneumatic duct. The group contains many edible fishes of the greatest economic importance, as the eel, hake, haddock, whiting, eusk, burbot, etc., among the gadoids, and the halibut, turbot, sole, plaice, flounder, etc., among the pleuronectids. It is divided by Gunther into *A. pleuronectoides*, characterized by having the two sides of the head unsymmetrical, and comprising the flatfishes of the family *Pleuronectidae*, and *A. guboides*, having the head symmetrical. By later writers it has been restricted to the forms manifesting bilateral symmetry. By Cope and Gill it has been further limited to those types which have the hyperocoaroid imperforate and the foramen between the hyperocoaroid and the hypocoaroid. It thus includes the families *Gadidae* and *Macruridae*. Also *Anacanthi*.

The drupes are roasted, and the kernels, having their intense acidity thus destroyed, become the pleasant and wholesome cashew-nuts. For example: "And he charged him to tell no man; but go and shew thyself to the priest." Luke v. 14. "He that curseth father or mother, let him die the death." Mat. xv. 4. As a figure of speech it has propriety and force only so far as it suggests that the emotion of the speaker is so great as to make him forget how he began his sentence, as in the following examples:

"If thou beest he — But, O, how fall'n! how changed!" *Milton*, P. L., i. 54.

"But — ah! — him! the first great Martyr in this great cause! . . . how shall I struggle with the emotions that stifle the utterance of thy name!" *D. Webster*, Speech at Bunker Hill.

In zool. the name is becoming limited to the *Eunectes murinus*.—**3.** In popular language, any enormous serpent which is not venomous, but which envelops and crushes its prey in its folds; any of the numerous species of the families *Boidae* and *Pythonidae*; any boa constrictor. Anacondas are found in the tropical countries of both hemispheres, and are generally blotched with black, brown, and yellow. Some are said to attain a length of upward of 30 feet, but they are usually found of a length between 12 and 20 feet. They are not venomous, but possess great constricting powers, the larger specimens being able to crush and swallow such quadrupeds as the tiger and jaguar. One of the species found in Brazil is there called *sacurut* or *sacuriba*. The name has been popularly applied to all the larger and more powerful snakes. Analgidæ (a-nal-'ji-dé), *n. pl.* [*NL., < Analges + -idæ.*] A family of parasitic tracheate aearines, typified by the genus *Analges*. The species live on the hairs of mammals and the feathers of birds.

Even the other element of the Jewish system, the element of prophecy, is not without its *analogon* among the heathen. *G. P. Fisher*, *Beginn of Christianity*, i.

analogous (a-nal'ō-gus), *a.* [*< L. analogus*, *< Gr. ἀνάλογος*, according to a due λόγος or ratio, proportionate, conformable, analogous, *< ἀνα*, throughout, according to (see *ana-*), + *λόγος*, ratio, proportion: see *logos* and *logic.*] **1.** In general, having analogy; corresponding (to something else) in some particular or particulars, while differing in others; bearing some resemblance or proportion: sometimes loosely used for *similar*. Thus, there is something in the exercise of the mind *analogous* to that of the body; animal organs, as the wing of a bird and that of a bat, which perform the same function, though different in structure, are *analogous*. See 4, below.

The effect of historical reading is *analogous*, in many respects, to that produced by foreign travel.

Mucanay, on History. Specifically—**2.** In *chem.*, closely alike, but differing in some degree as to each of the more prominent characters.—**3.** In *bot.*, resembling in form but not in plan of structure. Thus, the spur of a larkspur is *analogous* to one of the five spurs of a columbine, but they are not homologous, for the one is a sepal and the other a petal. *A. Gray*.

4. In *biol.*, similar physiologically but not anatomically; like in function but not in structure: the opposite of *homologous*. See *analogy*, 5.—**5.** In *logic*, from Albertus Magnus down to modern writers, applied to terms which are homonymous or equivocal in a special way, namely, those in which the identity of sound is not accidental, but is based upon a trope or upon some other reason.

A term is *analogous* whose single signification applies with equal propriety to more than one object; as, the leg of the table, the leg of the animal. *Whately*.

In all senses used with *to*, sometimes with. — *Syn.* Correspondent, similar, like.

analogously (a-nal'ō-gus-li), *adv.* In an analogous manner.

analogue (an'al-ō-g), *n.* [*< F. analogue*, adj. and *n.*, *< L. analogus*, adj., analogous; see *analogous.*] **1.** In general, something having analogy to something else; an object having some agreement or correspondence in relations, functions, or structure with another object.

The mechanical law, that action and reaction are equal, has its moral *analogue*. *H. Spencer*, *Social Statics*, p. 253.

It [cynicism] is the intellectual *analogue* of the truffle; and though it may be very well in giving a relish to thought for certain palates, it cannot supply the substance of it. *Lowell*, *Study Windows*, p. 137.

Specifically—**2.** In *philol.*, a word corresponding with another; an analogous term.—**3.** In *zool.* and *bot.*, an animal or a plant corresponding in some special and essential attributes or relations to a member of another group or region, so that it is a representative or counterpart.—**4.** In *biol.*, an organ in one species or group having the same function as an organ of different structure and origin in another species or group. The difference between *homologue* and *analogue* may be illustrated by the relation between the wing of a bird and that of a butterfly: as the two differ totally in anatomical structure, they cannot be said to be *homologues*, but they are *analogues*, since both serve for flight. See *analogy*, 5.

analogy (a-nal'ō-jī), *n.*; pl. *analogies* (-jīz). [*< F. analogie*, *< L. analogia*, *< Gr. ἀναλογία*, equality of ratios, proportion, analogy, *< ἀνάλογος*, analogous; see *analogous.*] **1.** In *math.*, an equation between ratios. This use is obsolete except in a few phrases, as *Napier's analogies*, which are four important formulas of spherical trigonometry.

2. An agreement, likeness, or proportion between the relations of things to one another; hence, often, agreement or likeness of things themselves. *Analogy* strictly denotes only a partial similarity, as in some special circumstances or effects predicable of two or more things in other respects essentially different: thus, when we say that learning *enlightens* the mind, we recognize an *analogy* between learning and light, the former being to the mind what the latter is to the eye, enabling it to discover things before hidden. [We

say that there is an analogy *between* things, and that one thing has analogy *to* or *with* another.]

Intuitive perceptions in spiritual beings may, perhaps, hold some analogy unto vision.

Sir T. Browne, *Christ. Mor.*, iii. 15. That there is a real analogy between an individual organism and a social organism, becomes undeniable when certain necessities determining structure are seen to govern them in common. *H. Spencer*, *Study of Sociol.*, p. 330.

In philosophy, *analogy* does not consist in the equality of two quantities, but of two qualitative relations.

Kant, *Critique of Pure Reason* (tr. by Max Muller). Specifically—**3.** In *logic*, a form of reasoning in which, from the similarity of two or more things in certain particulars, their similarity in other particulars is inferred. Thus, the earth and Mars are both planets, nearly equidistant from the sun, not differing greatly in density, having similar distributions of seas and continents, alike in conditions of humidity, temperature, seasons, day and night, etc.; but the earth also supports organic life; hence Mars (probably) supports organic life—is an argument from *analogy*. See *induction*.

4. In *gram.*, conformity to the spirit, structure, or general rules of a language; similarity as respects any of the characteristics of a language, as derivation, inflection, spelling, pronunciation, etc.—**5.** In *biol.*, resemblance without affinity; physiological or adaptive likeness between things morphologically or structurally unlike: the opposite of *homology*. Thus, there is an analogy between the wing of a bird and that of a butterfly, both being adapted to the same physiological purpose of flight, but there is no morphological relation between them. Analogy rests upon mere functional (that is, physiological) modifications; homology is grounded upon structural (that is, morphological) identity or unity. Analogy is the correlative of physiology, homology of morphology; but the two may be coincident, as when structures identical in morphology are used for the same purposes and are therefore physiologically identical.—**Analogy of faith, in *theol.*, the correspondence of the several parts of revelation with one another.**

alphabet, alphabete (an'al'fa-bet, -bēt), *a.* and *n.* [*< ML. alphabetus*, *< Gr. ἀλφάβητος*, not knowing one's A B C, *< ἀν-priv.* + *ἀλφάβητος*, the A B C, alphabet; see *alphabet.*] **I. a.** Not knowing the alphabet; illiterate.

II. n. One who does not know the alphabet; one who cannot read.

As late as the census of 1861 it was found that [in Italy] in a population of 21,777,331 there were no less than 16,999,701 *alphabetes*, or persons absolutely destitute of instruction, absolutely unable to read.

Encyc. Brit., XIII. 460. **alphabetetic** (an'al'fa-bet'ik), *a.* Not knowing the alphabet; illiterate; unable to read.

analyzable, analyze, etc. See *analyzable, etc.* **analyset**, *n.* [Also written *analise*, *< F. analyse*, *< ML. analysis*: see *analysis, analyze.*] *Analysis*.

The *analysis* of it [a tractate] may be spared, since it is in many hands. *Sp. Hackett*, *Life of Alp. Williams*, ii. 104.

analysis (a-nal'ī-sis), *n.* [Formerly *analyse*, *< F. analyse = Pg. analyse* or *analysis = Sp. análisis = It. analisi*, *< ML. analysis*, *< Gr. ἀνάλυσις*, a dissolving, resolution of a whole into its parts, solution of a problem, *analysis*, lit. a loosing, *< ἀναλύω*, resolve into its elements, *analyze*, lit. loosen, undo, *< ἀνά*, back, + *λύω*, loosen; see *loosen.*] **1.** The resolution or separation of anything which is compound, as a conception, a sentence, a material substance, or an event, into its constituent elements or into its causes; decomposition.

In the deductive syllogism we proceed by *analysis*—that is, by decomposing a whole into its parts.

Sir W. Hamilton. In the associationist psychology, the *analysis* of an idea is the discovery of the different kinds of elementary sensations which are associated together to produce the idea. *Mill*.

Analysis is real, as when a chemist separates two substances. Logical, as when we consider the properties of the sides and angles of a triangle separately, though we cannot think of a triangle without sides and angles. *Fleming*, *Vocab.* of *Phil.*

The *analysis* of a material object consists in breaking it up into those other material objects which are its elements, and it is only when we know something of the properties of these elements as they exist separately that we regard an *analysis* of the whole as satisfactory. *Mind*, IX. 80.

2. The regressive scientific method of discovery; research into causes; induction.—**3.** In *math.*: (*a*) Originally, and still frequently, a regressive method, said to have been invented by Plato, which first assumes the conclusion and gradually leads back to the premises. The thirteenth book of Euclid's Elements has the following definition, which is not supposed to be by Euclid, but which is ancient, and perhaps by Eudoxus: *Analysis* is the proceeding from the thing sought, as conceded, by consequences to some conceded truth; *synthesis* is the proceeding from the conceded by consequences to the truth sought. According to Pappus, *analysis* is of two kinds: *theoretical*, so called because used in research into truth, and *problematic*, so called because used in the solution of problems. In the former, the proposition to be proved is

assumed as true, and consequences are drawn from it until something conceded is reached, which if it is true involves the truth of the thing sought, the demonstration corresponding to the analysis; in the latter, the construction sought is assumed as already known, and consequences are deduced from it until something given is reached. (*b*) Algebraical reasoning, in which unknown quantities are operated upon in order to find their values. *Vieta*. (*c*) The treatment of problems by a consideration of infinitesimals, or something equivalent, especially by the differential calculus (including the integral calculus, the calculus of variations, etc.); often called *infinitesimal analysis*. This is the common meaning of the word in modern times.

Hence—(*d*) The discussion of a problem by means of algebra (in the sense of a system of symbols with rules of transformation), in opposition to a geometrical discussion of it, that is, a discussion resting directly upon the imagination of space; thus, analytical geometry is the treatment of geometrical problems by *analysis*.—**4.** A syllabus or synopsis of the contents of a book or discourse, or of the principles of a science.—**Analysis of a plant**, an examination of its structure and characters as a preliminary to its determination.—**Chemical analysis, Diophrantine analysis, etc.** See the adjectives.—**Fluxional analysis.** See *method of fluxions*, under *fluxion*.—**Gasometric analysis, harmonic analysis, etc.** See the adjectives.—**Qualitative analysis, in chem.**, the detection of the constituents of a compound body, in distinction from **quantitative analysis**, or the determination of the amounts and proportions of the constituents.—**Spectrum analysis.** See *spectrum*.—*Syn. Assay, Analysis, See also 809.*

analyst (an'a-list), *n.* [= *F. analyste = Pg. analista = Sp. It. analista*; formed from the verb *analyze*, as if from a verb in *-ize*: see *-ist, -ize.*] One who analyzes or who is versed in analysis, in any application of that word.

The *analyst* has not very many resources at his disposal for separating an intimate mixture of several bodies. *Pop. Sci. Mo.*, XXV. 203.

analytic, analytical (an-a-lī'tik, -ī-kal), *a.* and (*n.* in the first form) *n.* [*< ML. analyticus*, *< Gr. ἀναλυτικός*, analytic, *< ἀνά*, verbal adj. of *ἀνάλυσις*, dissolve, resolve, analyze; see *analysis.*] **I. a.** 1. Relating to, of the nature of, or operating by analysis: opposed to *synthetic, synthetical*: as, an *analytic mode* of thought.

His [Webster's] mind was *analytical* rather than constructive, and his restlessness of life was indicative of a certain instability of temper.

H. E. Scudder, *Noah Webster*, iv.

2. In the *Kantian logic*, explicative; involving a mere analysis or explication of knowledge, and not any material addition to it.

In all judgments in which there is a relation between subject and predicate (I speak of affirmative judgments only, the application to negative ones being easy), that relation can be of two kinds. Either the predicate B belongs to the subject A as something contained (though covertly) in the concept A; or B lies outside of the sphere of the concept A, though somehow connected with it. In the former case I call the judgment *analytical*; in the latter, *synthetical*. *Analytical* judgments (affirmative) are therefore those in which the connection of the predicate with the subject is conceived through identity, while others in which that connection is conceived without identity may be called *synthetical*.

Kant, *Critique of Pure Reason* (tr. by Max Muller). **3.** In *philol.*, deficient in inflections, and employing instead particles and auxiliary words to express modifications of meaning and to show the relations of words in a sentence: as, an *analytic language*.—**Analytical chemistry**, a method of physical research in which compound substances are resolved into their elements.—**Analytical definition.** See *definition*.—**Analytical geometry**, geometry treated by means of ordinary algebra, with a reference, direct or indirect, to a system of coordinates. See *coordinate*. In ordinary rectangular coordinates, for example, there is just one point of space for every set of values of the three variables, *x, y, z*. If, now, an equation is assumed between these variables, some of the sets of otherwise possible values will be excluded, and thus some of the points of space will be debarr'd to us, and we shall be restricted to a certain "locus" or place; and since the number of independent variables is, in consequence of the equation, reduced by one, the number of dimensions of the locus at any one point will be one less than that of space, so that the locus will be a surface. By the use of such equations of loci every problem of geometry is reduced to a problem of algebra, and the whole doctrine of geometry is mathematically identified with the algebra of three variables. Thus, to discover that, when four equations subsist between three unknown quantities, they can be satisfied simultaneously, amounts to discovering that, when a certain geometrical relation subsists between four surfaces, they meet in a common point. The idea of analytical geometry is exclusively due to the genius of Descartes (1596-1650), who published his *Géométrie*, containing illustrations of the new method, in 1636.—**Analytical jurisprudence**, a theory and system of jurisprudence wrought out neither by inquiring for ethical principles or the dictates of the sentiment of justice, nor for the rules which may be actually in force, but by analyzing, classifying, and comparing various legal conceptions. The best known of the analytical jurists are Bentham and

Austin.—Analytical key, in *bot.*, an arrangement of the prominent characters of a group of orders, or of genera, etc., in such a manner as to facilitate the determination of plants.—Analytical mechanics, the science of mechanics treated by the infinitesimal calculus.—Analytic function. See *function*.—Analytic method, in *logic*, a method which proceeds regressively or inductively from known particulars to the recognition of general principles, in opposition to the *synthetic method*, which advances from principles to particulars.

The name given by Aristotle to the whole of his logical investigations viewed as the analysis of thought; specifically, the name of two of his logical treatises, the *Prior* and the *Posterior Analytics*, the former of which deals with the doctrine of the syllogism, and the latter with proof, definition, division, and the knowledge of principles.—2. Same as *analytic*, 2.

analyzable, analysable (an'a-li-zā-bl), *a.* [*analyze, analyse, + -able.*] Capable of being analyzed.

analyze, analyse (an'a-liz), *v. t.*; pret. and pp. *analyzed, analysed*, ppr. *analyzing, analysing*. [Now usually spelled *analyse* in England, but formerly there, as still in the United States, spelled regularly *analyze* (as in Johnson's Dictionary), in the 17th century also *analize*, < F. *analyser* = Pr. Pg. *analysar* = Sp. *analizar* = It. *analizzare*, *analyze*; from the noun, F. *analyse*, E. obs. *analyse*, analysis, the term, conforming to *-ize*, as also in *paralyze*, *q. v.*: see *analysis* and *-ize*.] 1. To take to pieces; resolve into elements; separate, as a compound into its parts; ascertain the constituents or causes of; ascertain the characters or structure of, as a plant: as, to *analyze* a mineral, a sentence, or an argument; to *analyze* light by separating it into its prismatic constituents.

But do what we will, there remains in all deeply agreeable impressions a charming something we cannot *analyze*.

H. James, Jr., Trans. Sketches, p. 244.

In *bot.*, an anomalous or monstrous development of any part of a plant, owing to some unusual condition affecting growth, so that it presents an appearance altogether unlike the typical form, as when the calyx of a rose assumes the form of a leaf. Lichens are so liable to this change of form from modifications of climate, soil, etc., that some varieties have been placed in three or four different genera.

3. In *zool.* and *bot.*, the gradual change of form, generally ascending, traced in a group of animals or plants the members of which succeed each other in point of time. Thus, the earlier members of any group observed in the lower geological formations are by some said to be of a lower type than, and in point of development inferior to, their analogues in more recent strata or among living forms; but this has been controverted, especially by opponents of Darwinism.

In senses 2 and 3 also called *anamorphism*.

There are two very distinct species, the East Indian A. osculans and the African A. lamelligeris. The former is white with black wings and tail, the latter black. Also called Apertirostra, Cheno-rhynchus, Iltans, Hiator, and Rhynchochasna. 2. In ichth., a genus of Salmonidae. G. Cuvier, 1817. [Not in use.]

anathema (a-nath'ē-mä), n.; pl. anathemas, anathemata (-mäz, an-ä-them'a-tä). [LL. anathēma, < Gr. ἀνάθημα (in the Septuagint and the New Testament and hence in eccles. Gr. and L.), anything devoted to evil, an accursed thing, a curse; esp. of excommunication, an accused or excommunicated person; in classical Greek simply 'anything offered up or dedicated,' being another form of the regular ἀνάθημα, a votive offering set up in a temple, esp. as an ornament, hence also an ornament, a delight (> LL. anathēma, an offering, a gift), lit. 'that which is set up': < ἀναθήβαιναι, set up, dedicate, offer, < ἀνά, up, + θέβαιναι, put, place, set: see ana- and theme. The forms of anathema are thus distinguished: anathēma, when the dedication is carried out by the preservation of the object as a pious offering (Luke xxi. 5); anathēma, when it has in view the destruction of the object as accursed (Josh. vii. 12). A relic of the former and original sense of the word is found in the anathēmata of the middle ages, which were gifts and ornaments bestowed upon the church and con-

It is God's will, the Holy Father's will,
And Philip's will, and mine, that he should burn.
He is pronounced *anathema*.

Tennyson, Queen Mary, iv. 1.

2. A curse or denunciation pronounced with religious solemnity by ecclesiastical authority, involving excommunication. This species of excommunication was practised in the ancient churches against incorrigible offenders. Churches were warned not to receive them, magistrates and private persons were admonished not to harbor or maintain them, and priests were enjoined not to converse with them or attend their funerals. Also called *judiciary anathema*. The formula, "which if anyholly deny let him be *anathema*," is commonly added to the decrees of ecclesiastical councils, and especially to the doctrinal canons of ecumenical councils. It is denied by some theologians that the idea of a curse properly belongs to the *anathema* as used in the Christian church. See *excommunication*.

In pronouncing *anathema* against wilful heretics, the Church does but declare that they are excluded from her communion, and that they must, if they continue obstinate, perish eternally.

They are commonly divided into 5 subfamilies: *Cygninæ*, the swans; *Anserinæ*, the geese; *Anatinæ*, the river or fresh-water ducks; *Fuligininæ*, the sea-ducks; and *Merginæ*, the mergansers. There are upward of 175 species, representing about 70 modern genera or subgenera, of all parts of the world, and commonly called collectively *wild fowl* or *water-fowl*. The name is derived from some fancied resemblance of the *Lepas anatifera* to a bird, whence arose the vulgar error that the barnacle-geese, *Anas* or *Anser bernicla*, was produced from this cirriped, which was supposed to turn into the bird when it dropped from the tree upon which it was fabled to grow. [Disused.] See *Lepadidæ*, *Lepas*.

They are separated from the *Fuligininæ*, or sea-ducks, by having the hallux simple, not lobed. The name *Anatina* has occasionally been used to distinguish the "ducks," collectively, from other *Anatidæ*, as the swans, geese, and mergansers; in this use it includes the *Fuligininæ*. The *Anatina* proper include the mallard (*Anas boschas*), the wild original of domestic ducks, and many other species, as the wildegon, gadwall, pintail, shoveler, wood-duck, and the various kinds of teal. anchor¹ (ang'kor), *n.* [The spelling has been changed to make it look like *anchora*, a corrupt mod. spelling of *L. ancora*; prop. *anker*, in early mod. A device for securing a vessel to the ground under water by means of a cable.

Those carried by men-of-war are
 Anchors are generally made of iron, and consist of a strong shank *a*, at one extremity of which is the crown *c*, from which branch out two arms *b b*, curved inward, and each terminating in a broad palm or fluke *d d*, the sharp extremity of which is the peak or bill. At the other end of the shank is the stock *e e*, a transverse piece, behind which is a shackle or ring, to which a cable may be attached. The principal use of the stock, which in nearly all anchors is now made of iron and is placed at right angles to the curved arms *b b*, is to cause the arms to fall so that one of the flukes shall enter the ground. According to their various forms and uses, anchors are called *starboard-bow*, *port-bow*, *sheet*, *spare*, *stream*, *ledge*, and *grapnel* or *boat anchors*.

Those carried by men-of-war are
 The *starboard* and *port* bows, on the starboard and port bows respectively; the *sheet*, on either side of the ship further aft; and the *spare* anchor, which is usually in the hold. These are all of equal weight. To these are added for various purposes the *stream* and *ledge* anchors, which are smaller and of various sizes. Many improvements and novelties in the shape and construction of anchors have been introduced in recent times. The principal names connected with these alterations are those of Lieut. Rodgers, who introduced the *hollow-shanked anchor*, with the view of increasing the strength without adding weight; Mr. Porter, who made the arms and flukes movable by pivoting them to the shank instead of fixing them immovably, causing the anchor to take a ready and firmer hold, and avoiding the danger of fouling the cable; Mr. Trotman, who has further improved Porter's invention; and M. Martin, whose anchor is of very peculiar form, and is constructed so as to be

...causing the arms revolving through an angle of 30° either way, and the sharp points of the flukes being always ready to enter the ground. Of the many other forms, all

(except Tyzack's anchor, which has only one arm, pivoted on a bifurcation of the shank and arranged to swing between the two parts) are more or less closely related to the forms illustrated. The anchor is said to be *o-cockbill* when it is suspended vertically from the cathead ready to be let go; *apack* when the cable is drawn in so tight as to bring it directly under the ship; *atrap* or *at-rough* when it is just drawn out of the ground in a perpendicular direction; and *awash* when the stock is heave up to the surface of the water.

Existing or occurring in time long past, usually in remote ages; belonging to or associated with antiquity; old, as opposed to *modern*: as, *ancient authors*; *ancient records*. As specifically applied to history, *ancient* usually refers to times and events prior to the downfall of the Western Roman Empire, A. D. 476, and is opposed to *medieval*, which is applied to the period from about the fifth century to the end of the fifteenth, when modern history begins, and to *modern*, which is sometimes used of the whole period since the fifth century. In other uses it commonly has no exact reference to time. We lost a great number of *ancient* authors by the conquest of Egypt by the Saracens, which deprived Europe of the use of the papyrus. **I. D'Israeli**, *Curios*, of Lit., I. 67. The voice I hear this passing night was heard In *ancient* days by emperor and clown. Keats, *Ode to Nightingale*. See *demesne*. = Syn. *Ancient*, *Old*, *Antique*, *Antiquated*, *Old-fashioned*, *Quaint*, *Obsolete*, *Obsolescent*, *bygone*. *Ancient* and *old* are generally applied only to things subject to change. *Old* may apply to things which have long existed and still exist, while *ancient* may apply to things of equal age which have ceased to exist: as, *old laws*, *ancient* republics. *Ancient* properly refers to a higher degree of age than *old*: as, *old times*, *ancient* times; *old* institutions, *ancient* institutions. An *old*-looking man is one who seems advanced in years, while an *ancient*-looking man is one who seems to have survived from a past age. *Antique* is applied either to a thing which has come down from antiquity or to that which is made in imitation of *ancient* style: thus, *ancient* binding is binding done by the ancients, while *ancient* binding is an imitation of the *ancient* style. *Antiquated*, like *ancient*, may apply to a style or fashion, but it properly means *too old*; it is a disparaging word applied to ideas, laws, customs, dress, etc., which are out of date or outgrown: as, *antiquated* laws should be repealed; his head was full of *antiquated* notions. *Old-fashioned* is a milder word, noting that which has gone out of fashion, but may still be thought of as pleasing. *Quaint* is old-fashioned with a pleasing oddity: as, a *quaint* garb, a *quaint* manner of speech, a *quaint* face. *Obsolete* is applied to that which has gone completely out of use: as, an *obsolete* word, idea, law. *Obsolescent* is applied to that which is in process of becoming obsolete. *Ancient* and *antique* are opposed to *modern*; *old* to *new*, *young*, or *fresh*; *antiquated* to *permanent* or *established*; *old-fashioned* to *new-fashioned*; *obsolete* to *current* or *present*. Aged, Elderly, Old, etc. See *aged*.

From the earliest ME. period *and* has existed in the reduced form *an*: see *an*².] **A. Coördinate use.** 1. Connective: A word connecting a word, phrase, clause, or sentence with that which precedes it: a colorless particle without an exact synonym in English, but expressed approximately by 'with, along with, together with, besides, also, moreover,' the elements connected being grammatically coördinate.

In our last conflict four of his five wits went halting off, and now is the whole man governed with one. *Shak.*, Much Ado, i. 1.

We have been up and down to seek him.
Shak., M. of V., iii. 1.
 His fame and fate shall be
 An echo and a light unto eternity.
Shelley, Adonais, l. 8.
 Along the heath and near his favourite tree.
Gray, Elegy, l. 110.

When many words, phrases, clauses, or sentences are connected, the connective is now generally omitted before all except the last, unless retained for rhetorical effect. The connected elements are sometimes identical, expressing continuous repetition, either definitely, as, to walk two and two; or indefinitely, as, for ever and ever, to wait years and years.

To-morrow, and to-morrow, and to-morrow,
 Creeps in this petty pace from day to day,
 To the last syllable of recorded time.
Shak., Macbeth, v. 5.

The repetition often implies a difference of quality under the same name; as, there are deacons and deacons (that is, according to the proverb, "There's odds in deacons"); there are novels and novels (that is, all sorts of novels). To make the connection distinctly inclusive, the term *both* precedes the first member: as, *both* in England and in France. For this, by a Latinism, and . . . and has been sometimes used in poetry (Latin and French . . . et).

Thrones and civil and divine.
Sylvestre, tr. of Du Bartas.

2. Introductory: in continuation of a previous sentence expressed, implied, or understood.

And the Lord spake unto Moses. Num. i. 1.
 And he said unto Moses. Ex. xxiv. 1.

In this use, especially in continuation of the statement implied by assent to a previous question. The continuation may mark surprise, incredulity, indignation, etc.; as, And shall I see him again? And you dare thus address me?

And do you now put on your best attire,
 And do you now call out a holiday,
 And do you now strew flowers in his way,
 That comes in triumph over Pompey's blood?
Shak., J. C., i. 1.

Alas! and did my Saviour bleed? *Watts.*

3. Adverbial: Also; even. [Rare; in imitation of the Latin *et* in like use.]

He that batheth me, hatith and [*also*, *Purv.*] my fadir.
Wyclif, John xv. 23 (Oxf. ed.).

Not onely he brak the saboth, but and [*but*, *Purv.*] he seide his fadir God.
Wyclif, John v. 18.

Hence, *but and*, and also: common in the old ballads.

And they hae chased in gude green-wood
 The buck *but and* the rae.
Rose the Red, and White Lilly,
Child's Ballads, III. 180.
 She brought to him her beauty and truth,
But and broad earldoms three.
Lowell, Singing Leaves.

B. Conditional use. [In this use not found in AS., but very common in ME.; cf. Icel. *enda* and MHG. *unde* in similar use: a development of the coordinate use; cf. *so*, adv. conj., marking continuation, with *so*, conditional conj., if. This *and*, though identical with the coordinate, has been looked upon as a different word, and in modern editions is often artificially discriminated by being printed *an*: see *an*2.] If; supposing that: as, *and* you please. [Common in the older literature, but in actual speech now only dialectal.]

For, and I sholde rekenen every vice
 Which that she hath, ywis I were to nice.
Chaucer, Prolog. to Squire's Tale, l. 15.

Trevisa, tr. of Higden, Polychron., l. 1xix.

And I suffer this, may I go graze.
Fletcher, Woman's Prize, i. 3.

or drums exposed to the wind, and so arranged as to yield to its pressure and indicate the amount by their movements.

Lind's anemometer consists of a glass tube bent into the form of an inverted siphon, graduated, partly filled with water, and mounted as a weathercock.

To one of its open ends a metallic cylinder of the same bore as the tube is attached at right angles. The pressure of the wind blowing into this causes the water to sink in one arm of the tube and to rise in the other, and the difference of level of the two columns of water, which is measured by the amount of fall plus the amount of rise, as shown by the graduated scales, gives the force or pressure of the wind. By the use of mechanical or electrical appliances anemometers may be made to record as well as measure variations in the velocity and pressure of the wind. When they record the velocity or direction, or both, they are sometimes called *anemographs*; when they indicate the direction only, they are called *anemoscopes*; when they automatically record velocity, direction, and pressure, they are called *anemometographs* or *anemometriographic registers*.

= Syn. *Anger*, *Vexation*, *Indignation*, *Resentment*, *Wrath*, *Ire*, *Choler*, *Rage*, *Fury*, passion, displeasure, dudgeon, irritation, gall, bile, spleen. *Vexation* is the least forcible of these words, expressing the annoyance and impatient chafing of one whose mood has been crossed, whose expectations have not been realized, etc. *Indignation* may be the most high-minded and unselfish; it is intense feeling in view of grossly unworthy conduct, whether toward one's self or toward others. The other words denote almost exclusively feeling excited by the sense of personal injury. *Anger* is a sudden violent feeling of displeasure ever injury, disobedience, etc., accompanied by a retaliatory impulse; it easily becomes excessive, and its manifestation is generally accompanied by a loss of self-control. *Resentment* is the broadest in its meaning, denoting the instinctive and proper recoil of feeling when one is injured, and often a deep and bitter brooding over past wrongs, with a consequent hatred and settled desire for vengeance; it is, in the latter sense, the coolest and most permanent of these feelings. *Wrath* and *ire* express sudden feeling of great power, and are often associated with the notion of the superiority of the person: as, the *wrath* of Jove, the *ire* of Achilles. They are often the result of wounded pride. *Ire* is poetic. *Wrath* has also an exalted sense, expressive of a lofty indignation visiting justice upon wrong-doing. *Rage* is an outburst of anger, with little or no self-control; *fury* is even more violent than *rage*, rising almost to madness. The chief characteristic of *choler* is quickness to rise; it is irascibility, easily breaking into a high degree of resentful feeling.

White was her cheek; sharp breaths of *anger* puff'd
Her fairy nostril out. *Tennyson*, Merlin and Vivien.
One who fails in some simple mechanical action feels reaction at his own inability—a *vexation* arising quite apart from any importance of the end missed.

Irring, Indian Character.

When the injury he resented was a personal one, he apologized frankly for his *anger*, if it had transgressed the bounds of Christian *indignation*; but, when he was indignant with falsehood, injustice, or cowardly wrong done to another, it was terrible to see his whole face knit itself together with *wrath*. S. A. Brooke, F. W. Robertson, II. ii.

To be angry about trifles is mean and childish; to rage and be furious is brutish; and to maintain perpetual *wrath* is akin to the practice and temper of devils; but to prevent and suppress rising *resentment* is wise and glorious, is manly and divine.

Mad ire, and wrathful *fury*, makes me weep.

Angle² (ang'gl), *n.* [In mod. use only as a historical term; < L. *Anglus*, usually in pl. *Angli* (first in Tacitus), repr. the OTeut. form found in AS. *Angle*, *Engle*, *Engle*, reg. *Engle*, pl. (in comp. *Angel-*, *Engel-*), the people of *Angel*, *Angol*, *Angul*, *Ongul* (= leel. *Ongull*), a district of what is now Schleswig-Holstein, said to be so named from *angel*, *angul*, *ongul*, a hook, in ref. to its shape: see *angle*¹. Hence *Anglo-*, *Anglo-Saxon*, *English*, q. v.] One of a Teutonic tribe which in the earliest period of its recorded history dwelt in the neighborhood of the district now called *Angeln*, in Schleswig-Holstein, and which in the fifth century and later, accompanied by kindred tribes, the Saxons, Jutes, and Frisians, crossed over to Britain and colonized the greater part of it. The Angles were the most numerous of these settlers, and founded the three kingdoms of East Anglia, Mercia, and Northumbria. From them the entire country derived its name *England*, the "land of the Angles." See *Anglian*, *Anglo-Saxon*, and *English*.

angle³ (ang'gl), *n.* [< ME. *angle*, *angul*, sometimes *angule*, < OF. *angle* = Pr. *angle* = Sp. *angulo*, It. *angolo*, < L. *angulus*, a corner, an angle, prob. orig. **aneulus* (cf. *aneus*, bent, crooked) = Gr. ἀγκύλος, bent, crooked, curved, connected with ἄγκων, the bend of the arm, the elbow (see *ancon*), ἄγκος, a glen, dell (prop. a bend, hollow), ἄγκος, a hook, barb, angle, = L. *uncus*, bent, curved, a hook (see *uncous*); all appar. < √ **ank*, bend (appearing also in Gr. ἀγκυρα, > L. *ancora*, > E. *anker*¹, *anehor*¹), Skt. √ *aneh*, bend, and prob. connected with the Teut. group represented by *angle*¹: see *angle*¹.]

1. The difference in direction of two intersecting lines; the space included between two intersecting lines; the figure or projection formed by the meeting of two lines; a corner. In *geom.*, a *plane angle* is one formed by two lines, straight or curved, which meet in a plane; a *rectilinear angle*, one formed by two straight lines. The point where the lines meet is called the *vertex* of the angle, or the *angular point*, and the lines which contain the angle are called its *sides* or *legs*. The magnitude of the angle does not depend upon the length of the lines which form it, but merely on their relative positions. It is measured by the length of a circular arc of unit radius having for its center the *vertex* of

Fig. 1.

the angle, or point of intersection of the sides. Thus, the angle FEA, fig. 1, is measured by 32 degrees of the circumference of the arc AF. Angular magnitudes are also expressed in *quadrants* of four to the circumference, in *hours* of six to the quadrant, in *sexagesimal degrees* of 90 to the quadrant, (rarely) in *centesimal degrees* of 100 to the quadrant, etc. The arcs whose length is equal to the radius subtend an angle of 57° 17' 43". Theoretically, the measure of an angle is the logarithm of the anharmonic ratio made by the two sides with the two tangents to the absolute intersecting at the vertex. Angles receive different names, according to their magnitude, their construction, their position, etc. When one straight line in-

tersects another so as to make the four angles so formed equal, these angles are called *right angles*, and each is measured by an arc equal to one fourth of a circumference, or 90 degrees. Thus, ACD, fig. 2, is a *right angle*.

Fig. 2.

An angle which is less than a right angle is *acute*, as ACE. An *obtuse angle* is one which is greater than a right angle, as ECB. *Acute* and *obtuse angles* are both called *oblique*, in opposition to *right angles*. A *curvilinear angle* is formed by the meeting of the tangents to two curved lines at their point of intersection. *Adjacent* or *contiguous angles* are such as have one leg common to both angles, both together being equal to two right angles. Thus, in fig. 2, ACE and ECB are *adjacent angles*. *Conjugate angles* are two angles having a common vertex and common legs, one being concave, the other convex. A *straight angle* is an angle of 180°. A *reflex angle* is the same as a convex angle. (See *conjugate angles*, above.) *Exterior*, *external*, or *outward angles* are the angles of any rectilinear figure without it, made by producing one of the sides at each vertex, the angles formed within the figure being called *interior angles*. When one line intersects a pair of lines in a plane, of the eight angles so formed, those which are between the pair are called *interior*, those without *exterior*. Of the interior angles, a pair for different sides of the intersecting line, and at different intersected lines, are called *alternate* (which see). See *radian*.

Hence—2. An angular projection; a projecting corner: as, the *angles* of a building.—3. In *astrol.*, the 1st, 4th, 7th, or 10th house.—4. In *anat.*, same as *angulus*.—5. In *her.*, a charge representing a narrow band or ribbon bent in an angle.

A solid angle of a cone is measured by the area of the segment cut off by the cone on the surface of the sphere of unit radius, having its center at the vertex of the cone.

—**Sphenoidal angle.** See *craniometry*.—**Spherical angle,** an angle on the surface of a sphere contained between the arcs of two great circles. Anglo-Saxon (ang-glō-sak'sŏn), *n.* and *a.* [*< ML. Anglo-Saxones*, more correctly written *Anglosaxones*, pl., also *Angli Saxones* or *Angli et Saxones*, rarely *Saxones Angli*. The term frequently occurs in the charters of Alfred and his successors (chiefly in the gen. pl. with *rex*) as the general name of their people, all the Teutonic tribes in England; but it is sometimes confined to the people south of the Humber. The same term is used by foreign chroniclers and writers in Latin from the 8th to the 12th century, in the same meaning as by Alfred. In the Latin charters the gen. pl. varies from *Anglosaxonum* (besides *Anglorum Saxonum* and *Anglorum et Saxonum*) through the half AS. *Angulsaxonum* to the wholly AS. *Angulsaxna*, the AS. forms (in the Anglo-Saxon charters) being *Angulsaxna*, *-saxona*, *-saxna*, *-saxna*, *-saxna*, and *Angulsaxna*, gen. pl. of **Angulsaxun*

The ML. *Anglosaxones* is a true compound, following such forms as *L. Syrophanix*, *< Gr. Συροφονίξ*, a Syrophenician, i. e., a Syrian Phœnician; *L. Indoseythus*, *< Gr. Ἰνδοσεύθος*, an Indian Scythian; *L. Indoseythia*, *< Gr. Ἰνδοσεύθια*, Indoseythia; *L. Gallograeci*, the Gallic or Galatian Greeks, *Gallohispani*, the Gallic Hispanians, the Gauls of Spain, etc., the form in *-o* being the crude form or stem of the first element, which stands in a quasi-adjective relation to the second: see *-o*. Cf. *D. Angelsaker*, *n.*, *-saksisch*, *a.*, *Sw. Angelsaksare*, *n.*, *Angelsachsisk*, *a.*, *Dan. Angelsaker*, *n.*, *Angelsachsisk*, *a.*, based on the G. *Angelsachse*, pl. *-en*, *n.*, *Angelsächsisch*, *a.*; all mod.] **I. n. 1. (a)** Literally, one of the Angle or 'English' Saxons; sometimes restricted to the Saxons who dwelt chiefly in the southern districts (Wessex, Essex, Sussex, Middlesex—names which contain a form of *Saxon*—and Kent) of the country which came to be known, from a kindred tribe, as the land of the Angles, *Engla land*, now *England*, but usually extended to the whole people or nation formed by the aggregation of the Angles, Saxons, and other early Teutonic settlers in Britain, or the whole people of England before the conquest. (*b*) *pl.* The English race; all persons in Great Britain and Ireland, in the United States, and in their dependencies, who belong, actually or nominally, nearly or remotely, to the Teutonic stock of England; in the widest use, all English-speaking or English-appearing people. —**2.** [The adj. used absolutely.] The language of the Anglo-Saxons; Saxon; the earliest form of the English language, constituting, with Old Saxon, Old Friesic, and other dialects, the Old Low German group, belonging to the so-called West Germanic division of the Teutonic speech. The first Anglo-Saxon dialect to receive literary cultivation was that of the Angles (Anglo-Saxon *Engle*, *Engle*); hence the name *Englisc*, *Englisc*, that is, *English*, was afterward applied to all the dialects, and particularly to the prevailing one, West Saxon; it is the origin of the name *English* as applied to the modern mixed language. (See *English* and *English*.) A Middle Latin name for the language was *lingua Saxonica*, or *lingua Saxonum* or *Anglosaxonum*. The Anglo-Saxon language, in the widest use of the name, consisted of several dialects: the Northern or Anglian group, including the Old Northumbrian and the Midland or Mercian dialects, and the Southern or Saxon group, including the West Saxon and the Kentish. The Kentish remains are scanty, the Mercian scantier still and doubtful, while the Old Northumbrian remains are considerable. The great bulk of the Anglo-Saxon literature is West Saxon, the two terms being practically synonymous except when expressly distinguished as generic and specific. In the Old or Middle English period the Midland dialect became conspicuous, and it is to it that the form of modern English is chiefly due. In this dictionary *Anglo-Saxon* (abbreviated AS.) includes the whole language (but chiefly West Saxon, the Old Northumbrian and Kentish being discriminated when necessary) from the middle of the fifth century, or rather from the seventh century, when the first contemporary records begin, to the middle or end of the twelfth century; the language from the conquest (1066) to the end of this period being 'late Anglo-Saxon.' See *English*.

Several of the English scholars who are most active in the study of early English wage war on *Anglo-Saxon*. They attack the word. . . . They are still more hostile to the suggestion which goes with the word, that the speech called *Anglo-Saxon* is different from modern English, so as to deserve a separate name. They say there has been but one speech spoken in England by the Teutonic tribes and their descendants from Cædmon to Tennyson. . . . This classic *Anglo-Saxon* differs from our English in phonology, . . . in vocabulary, . . . [in] inflections, . . . in the derivation of words, . . . [in] syntax, . . . [in] versification [see *alliteration*], . . . [and in] the modes of thought. . . . The former is a synthetic German speech, with its own periods of early irregular idiom, classic cultivation, decline and fall into dialects; the latter an analytic mixed speech of Romance cultivation, with other periods of growth, and classic regularity and progress. And a chaos separates the two languages. It is only when attention is directed to the history of etymological forms that unity can be plausibly claimed for them. . . . But while the importance of these forms in tracing the descent of languages is probably not overrated, their weight in establishing identity or similarity may easily be. . . . The proposed use of *Old English* [in place of *Anglo-Saxon*] does not distinguish, but confounds all the periods of *Anglo-Saxon* and the two early periods of English. . . . The reasons urged for this nomenclature are in great part sentimental. It is thought to magnify the English language and race to represent

them as Low German, having an unbroken history parallel with that of the High German, and reaching through a more famous career to a more venerable antiquity. But Americans are taught to believe in mixed races, and it magnifies the English most in our eyes to represent it in the old fashion, as formed by the junction of two great languages, the bearers of the best cultivation of the Teutonic and Romanic races.

anharmonic (an-hār-mon'ik), *a.* [= F. *anharmonique*; < Gr. ἀν-priv. (an-5) + *harmonia*, q. v.] Not harmonic; in *geom.*, a term applied by Chasles to an important kind of ratio introduced into geometry by Möbius. If *a, x, y, b* are four values of a unidimensional variable (for instance, the positions of four points on a line), then [(*x*-*a*):(*x*-*b*)] × [(*y*-*b*):(*y*-*a*)] is called the *anharmonic ratio* of the four values. The intersections of a plane pencil of four lines with a transversal have the same anharmonic ratio, however the transversal may be situated; and this ratio is called the *anharmonic ratio* of the pencil. Anharmonic ratios are always preserved in orthographic projections. By means of these ratios, metrical properties are defined as projective properties of the absolute, or conic at infinity. See *absolute*, *n.*, 2. If from the intersection of two lines tangents are drawn to the absolute, the logarithm of the anharmonic ratio of the pencil so formed multiplied by $\frac{1}{2}\pi$ —2 is the angle of the first two lines. So, the logarithm of the anharmonic ratio of two points, together with the intersections of their connecting line with the absolute, when multiplied by a constant, gives the distance of these points.—**Anharmonic property**, in *geom.*, a property that is connected with an anharmonic ratio.

The corresponding acids represent one or more molecules of water in which the same radicals replace one half of the hydrogen. aniline (an'i-lin), *n.* and *a.* [*< anil* (with reference to the brilliant violet and indigo dyes which, with others, are prepared from aniline) + *-ine*.] **I.** *n.* Amidobenzol, C₆H₅NH₂, a substance which furnishes a number of brilliant dyes. It was discovered in 1826 by Unverdorben, as a product of the distillation of indigo, and called by him *crystalin*. It did not acquire commercial importance until 1856, when the purple dye mauve was prepared from it by Perkin. It is found in small quantities in coal-tar, but the aniline of commerce is obtained from benzol, another product of coal-tar, consisting of hydrogen and carbon, C₆H₆. Benzol when acted on by nitric acid produces nitrobenzol; and this latter substance when treated with nascent hydrogen, usually generated by the action of acetic acid upon iron filings or scraps, produces aniline, which is an oily liquid, colorless when pure, somewhat heavier than water, having a peculiar vinous smell and a burning taste. It is a strong base, and yields well-characterized salts. When acted on by arsenic acid, potassium bichromate, stannic chlorid, etc., aniline produces a great variety of compounds of very beautiful colors, known by the names of aniline purple, aniline green, violet, magenta, etc. Also called *antra*.

animal (an'ī-mal), *a.* and *n.* [First in 16th century; (*a*) *animal* (*any*mal), *animall*] = *F. Sp. Pg. animal* = *It. animale*, *adj.*, *< L. animalis*, animate, living (also aerial, consisting of air), *< anima*, a current of air, wind, air, breath, the vital principle, life, soul: see *anima*; (*b*) *animal*, *n.*, = *F. animal* = *Sp. Pg. animal* = *It. animale*, *< L. animal*, rarely *animale*, a living being, an animal in the widest sense, but sometimes restricted to a brute or beast; hence, in contempt, a human being; orig. neut. of *animalis*, *adj.*, as above. In mod. use *animal, a.*, 'living, animate,' is inseparably mixed with *animal, n.*, used attributively in the sense of 'pertaining to animals.'] 1. *a.* 1. Pertaining to sensation. See *animal spirits*, below.—2. Having life; living; animate.—3. Pertaining to the merely sentient part of a living being, as distinguished from the intellectual, rational, or spiritual part; of man, pertaining to those parts of his nature which he shares with inferior animals.

Animal anæretics. See *anæretic*.—**Animal charcoal.** Same as *bone-black*.—**Animal economy**, the physiological course of events in the life of an animal; the sequence of cause and effect observed in the vital activities of animals; the order of animated nature.—**Animal electricity**, electricity generated in animal bodies, as, in large quantities, in the electric eel, the torpedo, and *Malapterurus*, or, in small quantities, in nervous, muscular, and other tissues.—**Animal food**, flesh or any other part of an animal which is eaten.—**Animal force.** See *force*.—**Animal function**, any vital activity or physiological process performed in animal economy; any organic property or character of animals. Such functions may be grouped in a few broad classes: (1) Mentality, including all activities of the mind as distinguished from those of the body, such as instinct, reason, intellection, ideation, etc. (2) Sensibility, or feeling; the capability of responding automatically to external stimuli; irritability; innervation: common to all animals in a high degree as compared with plants. (3) Locomotion, usual in animals, but unusual in plants. (4) Nutrition, involving interstitial growth and waste and repair: common to plants and animals, but usually differently effected in the two, and with different material. (5) Reproduction, or generation, a process whereby growth is devoted to the formation of separate individuals. Functions shared by all organized beings are called *organic* or *vegetative* functions; no functions are peculiar to animals except those of mentality. Other lesser categories of functions are sometimes named: as, the *digestive* function; the *sexual* function; the function of *circulation*, of *respiration*; the function of the liver, or of any part or organ, that is, the special part which it takes in the animal economy.—**Animal heat**, the temperature maintained during life in an animal body, and requisite for its physiological functions. It varies from a degree not appreciably different from that of the element in which the animal lives to one much higher, the latter being the case with the higher animals. Difference in degree of animal heat is the ground of a division of the animals into warm-blooded and cold-blooded, or *Hæmatothermia* and *Hæmatocrya*. In the former a very sensibly elevated temperature is maintained. It is highest in birds, mounting sometimes to 112° F. In mammals a usual range is from 96° to 104° F. In man the mean normal temperature is about 98°, any considerable deviation from which is inconsistent with health. Animal heat is simply a case of chemical combustion; an analogous process goes on in plants. It is an index of the molecular motion of the body, and a measure of the work done by an animal in its vital activities.—**Animal kingdom**, all animals collectively; *Animalia*; one of the three grand divisions of the realm of nature (*imperium nature*), the other two comprising plants and minerals respectively. For scientific purposes it has been divided into classes, orders, families, genera, species, and groups (with intermediate divisions often formed by prefixing *sub-* or *super-* to these words), whereby the classification and registration of animals are facilitated. Examples of the primary divisions are the following: (1) The Linnean system (1760) divided animals into 6 classes: I. *Mammalia*; II. *Aves*; III. *Amphibia*; IV. *Pisces*; V. *Insecta*; VI. *Vermes*. (2) The system of Cuvier (1817) proposed 4 subkingdoms and 20 classes: I. *Vertebrata* (*Mammalia, Aves, Reptilia, Pisces*); II. *Mollusca* (*Cephalopoda, Pteropoda, Gasteropoda, Acephala, Brachiopoda, Cirrhopoda*); III. *Articulata* (*Annelides, Crustacea, Trilobita, Arachnida, Insecta*); IV. *Radiata* (*Echinodermata, Entozoa, Acalepha, Polypti, Infusoria*). (3) The system of Owen (1860) separated the *Protozoa* from *Animalia* proper as a separate kingdom, the latter being then divided into subkingdom I, *Invertebrata*, with 3 provinces, *Radiata, Articulata, Mollusca*; and subkingdom II, *Vertebrata*. (4) In 1869 Huxley arranged the animal kingdom in the 8 primary groups *Vertebrata, Mollusca, Molluscoidea, Coelenterata, Annelosa, Annuloida, Infusoria, Protozoa*. No two authorities agree upon the leading divisions of the animal kingdom, but a system like the following is now quite generally accepted: Subkingdom A (with one phylum), *Protozoa*: class I., *Rhizopoda*; class II., *Gregarinida*; class III., *Infusoria*. Subkingdom B, *Metazoa*. Phylum I, *Coelenterata*: class IV., *Spongiozoa*; class V., *Hydrozoa*; class VI., *Actinozoa*; class VII., *Ctenozoa*. Phylum 2, *Echinodermata*: class VIII., *Crinoidæ*; class IX., *Asteroidæ*; class X., *Echinoidea*; class XI., *Holothuroidea*. Phylum 3, *Vermes*: class XII., *Plathelminthes*; class XIII., *Nemathelminthes*; class XIV., *Gephyrea*; class XV., *Annelida*; class XVI., *Rotifera*. Phylum 4, *Arthropoda*: class XVII., *Crustacea*; class XVIII., *Arachnida*; class XIX., *Myriapoda*; class XX., *Insecta*. Phylum 5, *Molluscoidea*: class XXI., *Polyzoa*; class XXII., *Brachiopoda*. Phylum 6, *Mollusca*: class XXIII., *Acephala*; class XXIV., *Pteropoda*; class XXV., *Gasteropoda*; class XXVI., *Cephalopoda*. Phylum 7, *Vertebrata*: class XXVII., *Tunicata*; class XXVIII., *Leptocephalia*; class XXIX., *Marsipobranchii*; class XXX., *Elusobranchii*; class XXXI., *Pisces*; class XXXII., *Amphibia*; class XXXIII., *Reptilia*; class XXXIV., *Aves*; class XXXV., *Mammalia*. Three remarkable genera, *Dicynema, Sagitta*, and *Balanoglossus*, are severally regarded by many authors as types of classes.—**Animal magnetism, mechanics**, etc. See the nouns.—**Animal power**, the unit of power in men and animals, as *man-power, horse-power*, etc. Usually expressed in foot-pounds. See *horse-power*.—**Animal spirits**. (a) According to the doctrine of Galen, modified by Descartes, subtle and almost incorporeal parts of the living body, which penetrate the pores of the nerves and pass between the brain and the periphery, acting as the agents of volition and sensation. Also in the singular, *animal spirit*, equivalent to nervous force or action. (b) In modern use, exuberance of health and life; natural buoyancy; cheerfulness, animation, gaiety, and good humor.

Animal spirits constitute the power of the present, and their feats are like the structure of a pyramid.

Emerson, Society and Solitude.

II. *n.* 1. A sentient living being; an individual, organized, animated, and sentient portion of matter; in *zool.*, one of the *Animalia*; a member of the animal kingdom, as distinguished from a vegetable or a mineral. The distinction from the latter is sufficient, consisting in organization, interstitial nutrition, vitality, and animation; but it is impossible to draw any line between all vegetables and all

animals. Any criteria which may be diagnostic in most instances fail of applicability to the lowest forms of animal and vegetable life; and no definition which has been attempted has been entirely successful. Most animals are locomotory as well as motile; most plants are fixed. Most animals exhibit distinct active and apparently conscious or voluntary movements in response to irritation, mechanical or other; most plants do not. Most animals feed upon other animals or upon plants, that is to say, upon organic matter; most plants, upon inorganic substances. Most animals have no cellulose in their composition, nitrogenous compounds prevailing; while cellulose is highly characteristic of plants. Most animals inhale oxygen and exhale carbon dioxide, the reverse of the usual process in plants; and few animals have chlorophyll, which is so generally present in plants. Animals have usually a digestive cavity and a nervous system, and are capable of certain manifestations of consciousness, sentience, and volition, which can be attributed to plants only by great latitude in the use of the terms. See also *extract*.

Ordinary animals . . . not only possess conspicuous locomotive activity, but their parts readily alter their form or position when irritated. Their nutriment, consisting of other animals and of plants, is taken in the solid form into a digestive cavity. . . . Traced down to their lowest terms, the series of plant forms gradually lose more and more of their distinctive vegetable features, while the series of animal forms part with more and more of their distinctive animal characters, and the two series converge to a common term. . . . The most characteristic morphological peculiarity of the animal is the absence of any such cellulose investment [of the cells as plants possess]. The most characteristic physiological peculiarity of the animal is its want of power to manufacture protein out of simpler compounds. *Huxley, Anat. Invert., pp. 43-47.*

2. An inferior or irrational sentient being, in contradistinction to man; a brute; a beast; as, men and animals.—3. (b) *Animation, Life, Liveliness, Vivacity, Spirit, Sprightliness, Gaiety*, buoyancy, cheerfulness, energy, ardor. The first four words indicate, by derivation, a full possession of the faculties of life; therefore they are the opposite of deadness or of any semblance of lifelessness. The same idea appears in the next two under the notion of the possession of the breath of life. *Animation* applies broadly to manner, looks, and language: as, *animation* of countenance; he spoke with *animation*; it implies, perhaps, more warmth of feeling than the others. *Life* is not expressive of feeling, but of full vital force and any form of its manifestation: as, his words were instinct with *life*; his delivery lacked *life*. *Liveliness* is primarily suggestive of the energetic exercise of the powers of life in alertness of mind, freshness of interest, etc. *Vivacity* applies especially to conversation, but is used also of manner and looks; it belongs mostly to externals. *Spirit* is variously compounded of courage, vigor, firmness, enthusiasm, and zeal, according to the connection; it implies the best qualities of the manly man in action. *Sprightliness* is vivacity with mirth or gaiety; it is lighter than *spirit*. *Gaiety* is the overflow of animal spirits in talk and laughter promoted by social intercourse, festivity, dancing, etc. See *mirth, hilarity, gladness, happiness*.

animative

animative (an'i-mā-tiv), *a.* [*<* *animate* + *-ive*.]

Having the power of giving life or spirit.

animator (an'i-mā-tor), *n.* [*L.*, *<* *animare*: see *animate*, *r.*] One who or that which animates or gives life; one who enlivens or inspires. *Sir T. Browne*, *Vulg. Err.*

anime (an'i-me), *n.* [Sometimes accented like equiv. *F. animé*, on the fancy that it is so called because often "animé" (*<* *L. animatus*: see *animate*, *a.*) or "alive" with insects; but *E. prop. animé* = *F. animé* (Cotgrave), now *animé*, *Sp. Pg. anime* (*NL. anime, animi*, also *animam*), applied in the middle of the 16th century, and prob. earlier, to a gum brought from the East by the Portuguese; afterward applied to a similar product from the West Indies. The word, which has not been found native in the East or elsewhere, is said by Ray and others to be a Portuguese corruption of *aminuca*, *Gr. άμινκα* (Dioscorides), a resinous gum, this name being appar. an adj. (sc. *άμινκα*, myrrh), referring to a people of Arabia bordering on the Red Sea, from whom the gum was obtained. *Elemi* is a different word.] 1. The name of various resins, also known in pharmacy as *elemi* (which see).—2. A kind of copal, the produce principally of a leguminous tree, *Trachylobium Hornemannianum*, of Zanzibar. The best is that dug from the ground at the base of the trees, or that found in a semi-fossil state in localities where the tree is now extinct.

3. The produce of a very nearly allied tree of tropical America, *Hymenau Courbaril*, known in the West Indies as the locust-tree. It makes a fine varnish, and, as it burns with a very fragrant smell, is used in scenting pastilles.

4. Indian copal, produced by *Fateria Indica*. See *Fateria*.

Sometimes called *gum animé*.

animin, animine (an'i-min), *n.* [*<* *anim(al)* + *-in²*.] In *chem.*, an organic base obtained from bone-oil. *Watts*.

animism (an'i-mizm), *n.* [= *F. animisme*; *<* *L. anima*, soul (see *anima*), + *-ism*.] 1. The hypothesis, original with Pythagoras and Plato, of a force (*anima mundi*, or soul of the world) immaterial but inseparable from matter, and giving to matter its form and movements.—2. The theory of vital action and of disease propounded by the German chemist G. E. Stahl (1660-1734); the theory that the soul (*anima*) is the vital principle, the source of both the normal and the abnormal phenomena of life. In Stahl's theory the soul is regarded as the principle of life, and, in its normal action, of health; the body being supposed to be incapable of self-movement, and not only originally formed by the soul, but also set in motion and governed by it. Hence it was inferred that the source of disease is in some hindrance to the full and free activity of the soul, and that medical treatment should be confined to an attempt to remove such hindrances from it.

3. The general conception of or the belief in souls and other spiritual beings; the explanation of all the phenomena in nature not due to obvious material causes by attributing them to spiritual agency. Among the beliefs most characteristic of animism is that of a human apparitional soul, that is, of a vital and animating principle residing in the body, but distinct from it, bearing its form and appearance, but wanting its material and solid substance. At an early stage in the development of philosophy and religion events are frequently ascribed to agencies analogous to human souls, or to the spirits of the deceased.

Spiritual philosophy has influenced every province of human thought; and the history of *animism*, once clearly traced, would record the development, not of religion only, but of philosophy, science, and literature.

Encyc. Brit., II. 57.

The theory of *Animism* divides into two great dogmas, forming parts of one consistent doctrine; first, concerning souls of individual creatures, capable of continued existence after the death or destruction of the body; second, concerning other spirits, upward to the rank of powerful deities. *E. B. Tylor*, *Prim. Culture*, I. 385.

2. Active enmity; hatred or ill-will which manifests itself in active opposition.

=**Syn. 2.** *Animosity, Ill-will, Enmity, Malice, Hostility, Hatred, Hate, Malevolence, Malignity, Rancor, Grudge, Spite.* These words differ from those described under *acrony*, *anger*, and *antipathy* (which see) in that they represent deeper feelings or more permanent passions. *Ill-will* may represent the minimum of feeling, being a willing or wishing of ill to another, generally without disposition to be active in bringing the evil about. *Enmity* is a somewhat stronger feeling, and it often gratifies itself in trifling and cowardly ways. *Animosity* is more intense than *enmity*; it is avowed and active, and what it does is more serious than the covert attacks of *enmity* or the hasty attacks of *spite*. *Malice* is pure badness of heart, delighting in harm to others for its own sake. *Hostility* is less passionate than *animosity*, but not less avowed or active, being a state of mind including one to aggressive warfare. *Hatred* and *hate* are the general words to cover all these feelings; they may also be ultimate, expressing the concentration of the whole nature in an intense ill-will. *Malevolence* is more casual and temporary than *malice*, arising upon occasion furnished, and characterized by a wish that evil may befall another rather than by an intention to injure. *Malignity* is malice intensified; it is hatred in its aspect of destructiveness or desire to strike at the most vital interests of another. *Rancor* is hatred or malice turned sour or bitter; it is implacable in its vindictiveness. A *grudge* is a feeling of sullen ill-will or enmity, caused by a trifling wrong, and likely to be appeased when it has spent itself in a similar return against the offender. *Spite* is sudden, resentful, and generally quite as well pleased to mortify as to damage another; it may be as strong as malice or as weak as pique.

The personal animosity of a most ingenious man was the real cause of the utter destruction of Warburton's critical reputation. *I. D'Israeli*, *Lit. Quar.*, p. 397.

In England, in 1534, they were vested in the king, and in the reign of Queen Anne they were restored to the church, and appropriated to the augmentation of poor livings of the Church of England, forming what is known as "Queen Anne's bounty."

ally. All glassware, china, etc., which is to be subjected to great changes of temperature should be thus treated. The working of iron and steel by hammering, bending, rolling, drawing, etc., tends to harden them and make them brittle, and the original properties are restored by annealing. Steel plates and dies for bank-note printing and the like are annealed in a close box with iron filings or turnings, lime, or other substances, and are thus freed from carbon and reduced to pure soft iron, in which state they will readily take, under pressure, the finest engraving from a hardened plate or die. They are then hardened again to the degree necessary for their use in printing. Steel for engraving dies is commonly annealed by heating it to a bright cherry-red color, and cooling it gradually in a bed of charcoal.

Annellida (a-nel'i-dī), *n. pl.* [NL. (with single *l* after *F. annelēs*, pp. pl., ringed), prop. *Annellida*, < *L. annellus*, more correctly *annellus*, dim. of *annulus*, a ring (see *annulus*), + *-ida*.] **1.** The annelids or *Annelides*, a class of invertebrate animals, of the phylum *Vermes*, sometimes called the class of red-blooded worms. The body is composed of numerous (up to some 400) segments, somites, or metameres, and limbs are wanting, or, if present, are rudimentary and consist of the cilia or setae known as parapodia. A vascular system with red blood is usually present; the integument is soft, and composed of many layers, the surface being mostly ciliate or setose; the head is wanting or rudimentary, and in the latter case consists of a prostomium which may be cirriferous or tentaculiferous. The *Annellida* are the "worms," properly so called, of which the common earthworm, loebworm, and leech are characteristic examples. Most of the species are aquatic and marine. The class is differently limited by different authors, the principal variation among later writers, however, being in excluding or including the *Gephyrea*. Excluding these, as is done by the above definition, the *Annellida* have been divided into four orders: (1) *Hirudinea, Discophora*, or *Suctorii*, the leeches; (2) *Oligochaeta, Abranchia, Terricola*, etc., the earthworms and their immediate allies; (3) *Chaetopoda, Polychaeta, Errantia*, etc., the free sea-worms; and (4) *Cephalobranchia, Tubicolae*, etc., the tubicolous sea-worms. Another scheme divides *Annellida* into four subclasses: (1) *Archiannelida*, composed of the genus *Polyordius* and its allies; (2) *Chaetopoda*, including (2), (3), and (4) of the foregoing schedule; (3) *Hirudinea* or *Discophora*; and (4) *Enterozoista*, consisting of the genus *Balanoglossus*, which some authorities class with the ascidians or *Chordata*.

2. In Huxley's system (1877), a superordinal division including the *Polychaeta, Oligochaeta, Hirudinea*, and *Gephyrea*, with the *Myzostomata* doubtfully added thereto: a group the members of which resemble one another generally in the segmentation of the body indicated at least by the serially multiganglionate nervous centers (wanting in most *Gephyrea*), in the

presence of cilia and segmental organs, and in the nature of the larva, which are set free when the embryos hatch.

E. *ante*, *ampte*, < ME. *amte*, *amete*, < AS. *ǣmete*, *ǣmette* (also **ǣmete*, > ME. *emete*, *emette*, *emct*, E. *emmet*, q. v.) = OHG. *ǣmēiza*, MHG. *amēize*, G. *amēise* (MHG. also *emēze*, G. *emse*), ant. Of uncertain origin: perhaps < AS. *ā-*, E. *a-* (also found accented in AS. *ǣ-cunbia*, E. *oakum*), + **mātan* (in deriv. *mettan*, (cut, engrave, hence) paint, depict; cf. *metere*, a stone-cutter, and G. *stein-metz*, a stone-cutter) = OHG. *mēizan*, MHG. *mēizen*, = Icel. *meita*, cut. The lit. sense would then be 'the cutter or biter off'; unless the term be taken passively, in a sense like that of Gr. *ἔρροπον* or L. *insectum*, insect, lit. 'cut in.' The G. form is commonly referred (through MHG. *emēze*, G. *emse*) to G. *emsig*, MHG. *emzie*, OHG. *emizzig*, *emazzig*, industrious, assiduous, which agrees formally, but not in sense, with AS. *amctig*, *emtig*, E. *empty*, q. v. See *mirē*² and *pismire*.] An emmet; a hymenopterous insect of the family *Formicidae* and the Linnean genus *Formica*, now divided into several genera. Ants live in communities, and the internal economy of their nest or hillcock presents an extraordinary example of the results of combined industry. Each community comprises males with four wings, females much larger than the males and possessing wings during the pairing season only, and barren females, called neuters, workers, or nurses, destitute of wings. The females lay their eggs in parcels of six or more. The males and females desert the nest and copulate soon after becoming perfect; but the latter are

brought back by the workers, or else found new colonies, with or without help. The male, like the drone-bee, becomes useless after impregnating the female. The grubs spin a cocoon, and become pupae, which resemble barley-corns, and are popularly taken for eggs. Under the names of *ants' brood*, *ants' eggs*, they are an article of import in some northern countries for making vinegar in Norway. The young grubs are fed by the females and by the nurses, who also construct the streets and galleries of the colony, and in general perform all the work of the community. There are many kinds of ants, called from the operations they perform mining-ants, carpenters, masons, etc. The favorite food of ants is honey, particularly the honey-dew excreted by aphids; but they also live on fruits, insects and their larvae, and dead birds and mammals. They are torpid in winter. Those of the same or different species engage in pitched battles, and capture slaves or take larvae from other nests. Some species have stings, others squirt out an irritant fluid (formic acid). See *cut* under *Atta*. The name *ant*, or *white ant*, is also given to insects of the neuropterous genus *Termes*. See *termite*.

It seems consonant to reason that the fabric of the world did not long antedede its motion.

Sir M. Hale, *Orig. of Mankind*, i. 82. Primarily certain individual claims, and secondarily the social welfare furthered by enforcing such claims, furnish a warrant for law, anteeding political authority and its enactments. *H. Spencer*, *Prin. of Sociol.*, § 534.

antedecence (än-tē-sē'dens), *n.* [= *F.* *antedecence*, < *antedecede*: see *antedecedent*.] 1. The act of going before, or state of being before, in time, place, rank, or logical order; precedence.

Meanwhile, if we are really to think of freedom as absolute and perfect in man—a perfect freedom from the necessity of any antedecence—we ought logically to think of it as free from all influence of God or Devil, as Will, that is, in which the Omnipresent is not present and the Omnipotent has no power. *Maudsley*, *Body and Will*, p. 7.

2. In *astron.*, an apparent motion of a planet from east to west, or contrary to the order of the signs of the zodiac. = *Syn.* 1. *Precedence*, etc. See *priority*.

antedecency (än-tē-sē'den-si), *n.* The quality or condition of being antedecedent.

Unity is before any multiplied number. Which antedecency of unity . . . he [Diogenes] applyeth unto the Deity. *Fotherby*, *Atheomastix*, p. 308.

There is always and everywhere an antedecency of the conception to the expression. *Whitney*, *Life and Growth of Lang.*, p. 137.

antedecedent (än-tē-sē'dent), *a.* and *n.* [= *F.* *antedecedent*, < *L.* *antedecedent* (-t-s), *pp.* of *antedecere*, *go before*; see *antedede*.] **I.** *a.* Being before in time, place, rank, or logical order; prior; anterior: as, an event *antedecedent* to the deluge.

In *logic*: (a) That member of a conditional proposition of the form, "If A is, then B is," which states, as a hypothesis, the condition of the truth of what is expressed in the other member, termed the *consequent*: in the proposition given the antedecedent is "if A is." The whole proposition amounts to the statement that all possible cases of the truth of the antedecedent are included among the possible cases of the truth of the consequent. (b)

The premise of a consequence, or syllogism in the first figure with the major premise suppressed. Thus, the argument, "A syllogism has never existed in *sensu*, therefore it does not exist in *intellectu*," is a consequence, its premise is the *antedecedent*, and its conclusion the *consequent*. (c) An event upon which another event follows. So used particularly by nominalists. An *invariable antedecedent*, with J. S. Mill, is an event upon which another follows according to an invariable rule or uniformity of nature. It does not, therefore, mean (as might be supposed) an event of a kind which antedecedes every occurrence of another kind of event. Thus, lightning is not an invariable antedecedent of thunder, for thunder does not always follow it; and this although lightning antedecedes thunder whenever thunder is heard.

One of the lateral articulated appendages occurring in pairs on that segment of the head of an arthropod animal, as an insect, which immediately precedes the mouth or mandibular segment; a feeler or 'horn.' They vary greatly in size, shape, and function. The appendages of the head, proceeding forward from the mouth-parts, are: (1) antennæ, (2) antennule, (3) ophthalmites or eye-stalks, (a) pl. In Crustacea: (1) Properly, the posterior one of the two pairs of feelers or horns borne upon the head of most crustaceans, as crabs and lobsters, as distinguished from the anterior pair, or antennule. From their relative size they are known as the long feelers, in distinction from the antennule, or short feelers. When fully developed, the antennæ consist of a number of parts, which, beginning with the base, are named the basiscerite, the scaphocerite, the ischiocerite, the merocerite, the carpocerite, and the terminal procerite. The last may consist of a long filament with many articulations, sometimes exceeding the whole length of the animal's body. See cuts under Cypris, Cyclopoidea, and Limnetis. (c) In Insecta and Myriapoda, a horn or feeler; one of the pair of jointed flexible sensitive appendages of the head, morphologically situated between the mouth-parts and the eyes, though generally appearing in the adult between or before the eyes. These characteristic organs are usually filamentous with many articulations, and are very diverse in form; some of the terms used in describing their shapes are filiform, denticulate, bipinnate, clavate, geniculate. In Coleoptera, divisions have been founded upon the shapes of the antennæ, as lamellicorn, clavicorn, longicorn, etc. These organs are almost universally present in some form or other, though occasionally rudimentary and inconspicuous, in which cases the insects are termed acerous, as distinguished from dicerous. The parts of a well-formed antenna usually recognized are the pedicel, scape, and flagellum or clava, the last usually composing most of the length of the organ. — 3. pl. OS. AS.*, etc., *and-*: see further under *ante-* and *and-*. In a few words *anti-* represents *L. ante*, *anti-*, as in *anticipate*, *antibrachial*.] A prefix of Greek origin: originally only in compounds or derivatives taken from the Greek or formed of Greek elements, as in *antipathy*, *antinomy*, etc. (the earliest example in English being *antichrist*, which see), but now a familiar English formative, meaning primarily against, opposed to. It forms—(1) Compound nouns (with the accent on the prefix), in which *anti-* has the attributive force of opposed to, opponent, opposite, counter, as in *antichrist*, *antipope*, *antichorus*, *anticyclone*, *antipole*, etc. (2) Compound adjectives (with the accent on the radical element), in which *anti-* retains its original prepositional force, against, opposed to, governing the noun expressed or implied, as in *antichristian*, *antipapal*, *antichlerical*, etc. Such compound adjectives adopt an adjective termination, as in the examples just cited, or omit it, as in *antichurch*, *antiallavery*, *antiprohibition*, *antirent*, when it does not exist or is not readily formed. This mixture of adjective and substantive forms makes easy the development, from the compound adjectives, of abstract nouns like *antiallavery*, *antiprohibition*, etc. In form these compound adjectives, like *antichristian*, *antichlerical*, *anti-Socialian*, are thus, strictly, made up of *anti-* with a noun and an adjective termination, as *anti + Christ + -ian*, *anti + cleric + -al*, *anti + Social + -ian*, etc.; but in effect they are often equivalent to, and for brevity they may be marked as, *anti + Christian*, *anti + clerical*, etc. These compounds are especially applied to persons or parties opposed in opinion or practice to other persons or parties, or to things; in medicine, to remedies producing or intended to produce an effect or condition opposite to or in correction or prevention of that implied in the simple word, as *anticrossive*, *antipretic*, *antifat*, etc. In the etymologies following, *anti-* is treated as a mere English formative, and is not referred to the Greek, except when obviously taken, in connection with the radical element, directly from the Greek.

The Antiburghers denied that this oath could be taken consistently with the principles of the church, while the Burghers affirmed its compatibility. The result was that the church was rent in two, each section establishing a communion of its own, known respectively as the General Associate Synod, or Antiburghers, and the Associate Synod, or Burghers. They were reunited in 1820, after seventy-three years of separation, thus constituting the United Secession Church.

As ye have heard that *antichrist* shall come, even now are there many *antichrists*. . . He is *antichrist*, that denieth the Father and the Son. *1 John* ii. 18, 22.

The word occurs in the Scriptures only in the Epistles of John; but the same person or power is elsewhere referred to (2 *Thes.* ii. 1-12; *1 Tim.* iv. 1-3; *2 Pet.* ii. 1). Interpreters of Scripture differ in their understanding of these references. Some suppose them to relate to a lawless but impersonal power, a spirit opposed to Christianity; some to a historic personage or potentate, as Caligula, Titus, the pope, or Luther; some to a great power for evil yet to be

manifested and gathered about a central personal agency. Roman Catholic writers commonly interpret the word generally of any adversary of Christ and of the authority of the church, but specifically as the last and greatest persecutor of the Christian church at the end of the world. The name has also been applied to the pretenders to the messiahship, or false Christs (Mat. xxiv. 24), who have arisen at various periods, as being antagonistic to the true Christ. Of these as many as sixty-four have been reckoned, including some of little importance, and also some, as Mohammed, who cannot properly be classed among them.

4. In *logic*, the term used since Cicero (Latin *anticipatio*) to translate the "prolepsis" (πρόληψις) of the Epicureans and Stoics. Hence, with later philosophers, the word denotes knowledge drawn from the mind, independently of experience; the knowledge of axioms or first principles. These are the Epistle to the Hebrews, the Epistles of James and Jude, the Second Epistle of Peter, the Second and Third Epistles of John, and the Revelation. They are classed by Roman Catholic theologians as *deuterocanonical* (which see).

See *Antilocapridæ*. The members of this genus have no larniers, or metatarsal glands, as in *Cervidæ*, but have a system of eleven odor-

Pronghorn (*Antilocapra americana*).

iferous sebaceous cutaneous glands. They have small hoofs, no false hoofs, slender limbs, a comparatively short and stout neck, erect, pointed ears, large liquid eyes situated directly beneath the base of the horns, extremely short tail, and a harsh, stiff, brittle pelage devoid of felting quality. See *pronghorn*.

antilocaprid (an-ti-lō-kap'rid), *n.* An antelope of the family *Antilocapridæ*.

Antilocapridæ (an-ti-lō-kap'ri-dē), *n. pl.* [*NL.*, *Gr. ἀντιλόπη*, antelope, + *L. capra*, a goat.] A family of ruminant quadrupeds framed for the reception of the genus *Antilocapra*, containing the so-called American antelope. It is characterized by forked hollow horns supported upon a long bony core or osseous process of the frontal bone, as in the cattle or true hollow-horned ruminants, yet deciduous, being periodically shed and renewed like the antlers of deer. These singular horns are composed of agglutinated hairs hardening into solid cornucopious tissue, and when sprouting resemble the skin-covered knobs upon the head of the giraffe. There are several remarkable osteological peculiarities of the skull, among them the inclosure of the styloid process of

the temporal bone in a sheath formed by an extension of the external auditory meatus.

[*Rare.*] (*b*) As commonly used, the number corresponding to any logarithm. Thus, according to the common system, 100 is the antilogarithm of 2, because 2 is the logarithm of 100; it is denoted thus: *log.* ² *log.* ¹⁰⁰, which may be read: "The number to the *log.* 2," "the number to the *log.* a."

Philosophy was thus again reconciled with nature; consciousness was not a bundle of antilogies; certainty and knowledge were not evicted from man. *Sir W. Hamilton*.

In these antilogies and apologies, however, a difference might be perceived: and some of the advocates of Henry appeared less anxious to attack Rome than to defend their prince. *R. W. Dixon*, Hist. Church of Eng., vi.

Antelope (an-ti-lō-pē), *n.* [*NL.*: see *antelope*.]

I. A genus of *Antilopinæ* (which see). The term has been used with such latitude in its application to the whole of the group *Antilopinæ*, and, when restricted, has been employed in so many different senses, that it has lost whatever exact meaning it may have possessed originally, and has become a loose, fluctuating synonym of the subfamily name *Antilopinæ*. Even in early usage it appears to have been applied to several different small gazel-like antelopes. It is now commonly restricted to the sasin or Indian antelope, *Antelope cervicapra*. See *cut* under *sasin*. *2†* (an-ti-lōp). [*L. c.*] Obsolete (English) spelling of *antelope*.

Antilopidæ (an-ti-lōp'i-dē), *n. pl.* [*NL.*, *Gr. ἀντιλόπη* + *-idæ*.] A family of ruminants; the antelopes; sometimes used as a synonym of *Antilopinæ*. Also written *Antelopidæ*.

Antilopinæ (an-ti-lō-pī'nē), *n. pl.* [*NL.*, *Gr. ἀντιλόπη* + *-inæ*.] A subfamily of old-world and chiefly African ruminants, the antelopes, a group belonging to the family *Bovidæ*. They differ from cattle in their smaller size, more lithe and graceful form, slenderer legs, which are comparatively longer in the shank, and longer neck, with slenderer vertebrae, uplifting the head. The *Antilopinæ* shade directly into the sheep and goats (*Ovinæ* and *Caprinæ*), being separable from them by no technical character; but the horns usually differ from the forms presented by goats and sheep, though they are so diverse as to be definable by no common character. *Antilopinæ* are especially numerous in species and individuals in Africa, of which continent they are the most characteristic animals. Upward of 50 African species have been described; there are many others in Asia, and a few in Europe. Some 75 species are recognized by naturalists, but probably the number of genuine species is less than this. Several hundred different names, generic, specific, and vernacular, have been applied to these animals; and no authors except mere compilers are agreed upon the division of the group. The antelopes present the utmost diversity of stature, form, and general appearance, ranging from the smallest and most delicate gazels, steinboks, and springboks to the bulky eland, nyghau, or hartbeest, as large as a cow, horse, or stag, and include the singularly misshapen gnu (*Connochaetes gnu*). The Rocky Mountain goat, *Haplocervus montanus*, related to the Alpine chamois, *Rupicapra traqas*, and the goral, *Neomohodus goral*, another goat-like antelope, are also placed in this subfamily. The bubaline or bovine antelopes include the hartbeest (*Alelaphus caama*), blesbok (*A. albibrons*), and bontebok (*A. pygargus*). Four-horned antelopes belong to the genus *Tetraceros*. The pillantomba and coquetoon antelopes, the blawwbok, duyker, etc., are placed in the genus *Cephalophus*. The steinboks are species of *Neotragus*; the singing, kobus, leche, babor, etc., are of the genera *Cervicapra*, *Kobus*, and their immediate allies. The gazels are a large group, constituting the genus *Gazella* (or *Dorcops*) and others; they include the springbok (*Antidorcas cauroreus*), and the Indian, Arabian, and Syrian, as well as African. The sable or equine antelopes constitute the genus *Hippotragus*. The addax is *Addax nasomaculatus*. There are several species of *Oryx*, as *O. leucoryx*. The nyghau is *Boselaphus trapecinellus*. The harness antelopes (so called from the stripes on the sides), or the boschboks, are species of *Tragelaphus*, as *T. scriptus*, *T. sylvaticus*. The koodoo is a large antelope with twisted horns (*Strepsiceros kudus*). The eland is *Oreos caama*. The so-called saiga antelope is the type of a different family, *Saigidae* (which see); the American antelope also belongs to a different family, *Antilocapridæ* (which see). See *cuts* under *addax*, *eland*, *gazel*, *gnu*, and *Haplocervus*. Also written *Antelopinæ*.

As for angels, it is not comical enough to put them in antimasks. *Bacon, Masques and Triumphs.*

Antimason (an-ti-mā'sn), *n.* [*< anti- + mason, for freemason, q. v.*] One hostile to masonry or freemasonry; specifically, a member of the Antimasonic party.

Antimasonic (an'ti-mā-son'ik), *a.* [*< Antimason + -ic.*] Opposed to freemasonry.—**Antimasonic party**, in *U. S. hist.*, a political party which originated in New York State about 1827, in the excitement caused by the supposed murder of William Morgan, of Batavia, New York, in 1826, by freemasons, to prevent a threatened public disclosure of the secrets of their order. The movement spread to some other States, and a national party was organized, but within about ten years it disappeared, most of the Antimasons becoming Whigs. Its characteristic tenet was that freemasons ought to be excluded from public office, because they would necessarily regard their obligations to the society more than their obligations to the state. Its principles were revived in a so-called "American party" organized in 1875.

Ch.*, a consecrated cloth on which the eucharist is consecrated in places where there is no consecrated altar. It takes the place of the portable altar of the Latin Church. The term is sometimes extended in the Syrian churches to a thin slab of wood consecrated for a like purpose. Also written *antimission*.

antimere (an'ti-mēr), *n.* [*< Gr. αντί, against, + μέρος, a part.*] In *biol.*, a segment or division of the body in the direction of one of the secondary or transverse axes, all of which are at right angles to the primary or longitudinal axis.

When these axes are not differentiated in any way, all antimeres are alike, and are parts arranged around the long prime axis like the spokes and felloes of a wheel around the axis of the hub; a disposition preserved with much accuracy in many of the *Radiata*, among which, for example, the arms of a starfish, the tentacles of a sea-anemone or coral-animalcule, or the rows of ambulacra of a sea-urchin are antimeres. Oftener, however, the transverse axes are differentiated, some being shorter, others longer, giving rise to sides, as right and left, in the direction of the longer transverse axes, in which case right and left parts are antimeres. This constitutes bilateral symmetry. Parts which may be perceived to correspond at opposite poles of the other (shorter) transverse axes, constituting dorsobasal symmetry, are also antimeres; but this condition is obscure. Likewise, again, parts along the primary longitudinal axis, or at its poles, which may be observed or be conceived to constitute anteroposterior symmetry, are essentially antimere; but this condition, like dorsobasal symmetry, is obscure, while the serial succession of like parts along the prime axis, as the rings of a worm, crustacean, or insect, and the double rings of a vertebrate, is so marked that antimeres of this kind are not called antimeres, but *metameres*; such are the ordinary segments, somites, arthromeres, or diarthromeres of any articulate or vertebrate animal. Antimere is therefore practically restricted to such radiating and bilateral parts as are more or less symmetrical with one another. *See eudipleural.*

G. antimonium = Russ. antimoniya = Pol. antymonium, etc., < ML. antimonium, antimony, a word of unknown origin, simulating a Gr. appearance, perhaps a perversion, through such simulation (*antimonium*, < **atimonium*, < **atimodium*, < **athimodium?*), of the Ar. name (with art. al-?) *ethmad, othmod, ulmud*, earlier *ihmid, al-antym*, which is in turn perhaps an accommodation (through **isthinnid?*) of Gr. σπυμύδ-, one of the stems of σπυμύ (σπυμύ-, σπυμύδ-, also σπυμύ and σπύβι (σπύβι?), > L. *stimmī, stibi*, and *stibium*, antimony, the Gr. name itself being appar. of foreign or Eastern origin: see *stibium*. False etymologies formerly current are: (1) < F. *antimoine*, < Gr. αντί, against, + *moine*, a monk, as if 'monk's bane'; (2) < Gr. αντί, against, + *μόνος*, alone, as if never found alone; (3) < Gr. αντί, instead of, + L. *minium*, red lead, "because women used it instead of red lead" as an eye-paint.] Chemical symbol, Sb (Latin *stibium*); atomic weight, 120. A metal of a white color and bright luster which does not readily tarnish, having a specific gravity of 6.7, crystallizing in the rhombohedral system, and in the mass ordinarily showing a crystalline structure and highly perfect cleavage. It conducts both heat and electricity with some readiness, but less perfectly than the true metals, and differs from them also in being brittle like arsenic. It melts at 430° C. (806° F.), and volatilizes slowly at a red heat; when melted in the air it oxidizes readily, forming antimony trioxid, Sb₂O₃. Antimony occurs uncombined in nature to a limited extent, usually in granular or foliated masses, often with a botryoidal or reniform surface. Many compounds of antimony are found in nature, the most important of them being the sulphid, Sb₂S₃, called gray antimony, antimony-glance, or stibnite. Dyscrasite is a compound of antimony and silver. There are also a number of minerals containing antimony, sulphur, and lead (like jamesonite), or antimony, sulphur, and silver (like pyrrargyrite or ruby silver), or antimony, sulphur, and copper (like tetrahedrite). The oxisulphid kermesite or red antimony and the oxids cervantite and stibiconite (antimony ochre) are also important minerals. Antimony has few uses in the arts; it enters, however, into a number of very valuable alloys, as type-metal, pewter, Britannia metal, and Babbitt metal, and is used in medicine. Tartar emetic is the tartrate of antimony and potassium. James's powder is a mixture of oxid of antimony and phosphate of lime.—**Antimony vermilion**, a sulphid of antimony suggested but never used as a pigment.—**Argentine flowers of antimony**, the tetroxid of antimony.—**Arsenical antimony.** *See allomontite.*—**Black antimony**, antimonious sulphid.—**Butter of antimony.** *See butter¹.*—**Ceruse of antimony.** *See ceruse.*—**Diaphoretic antimony**, a preparation chiefly consisting of potassium antimoniate, made by exposing the neutral antimoniate to the action of carbonic-acid gas, or by deflagrating pure antimony with potassium nitrate. It is used in the manufacture of enamels, and was formerly administered as a medicine.—**Glass of antimony.** *See glass.*—**Red antimony ore**, an oxisulphid of antimony. Same as *kermesite*.—**White antimony**, or **antimony white**, native antimony trioxid, Sb₂O₃.—**Yellow antimony**, or **antimony yellow**, a preparation of the oxids of lead and antimony, of a deep-yellow color, used in enamel- and porcelain-painting. It is of various tints, and the brilliancy of the brighter hues is not affected by foul air.*

II. n. In *theol.*, one who maintains that Christians are freed from the moral law as set forth in the Old Testament by the new dispensation of grace as set forth in the gospel; an opponent of legalism in morals. Antinomianism has existed in three forms: in the early church, as a species of Gnosticism, in the doctrine that sin is an incident of the body, and that a regenerate soul cannot sin; later, in the Reformation, as a reaction against the doctrine of good works in the Roman Catholic Church, in the antagonistic doctrine that man is saved by faith alone, regardless of his obedience to or disobedience of the moral law as a rule of life; finally, as a phase of extreme Calvinism, in English Puritan theology, in the doctrine that the sins of the elect are so transferred to Christ that they become his transgressions and cease to be the transgressions of the actual sinner. The chief exponent of the second form of antinomianism was John Agricola (Germany, 1492-1566); the chief exponent of the third, Tobias Crisp, D. D. (England, 1600-1642). [Often with a capital.]

= *Syn. Hatred, Dislike, Antipathy, Disgust, Aversion, Reluctance, Repugnance. Hatred* is the deepest and most

permanent of these feelings; it is rarely used except of persons. *Dislike* is the most general word, and depends upon the connection for its strength; it is opposed to *liking* or *fondness*. *Antipathy* expresses most of constitutional feeling and least of volition: the turkey-cock has an *antipathy* to the color red; many people have an intense *antipathy* to snakes, rats, loads. In figurative use, *antipathy* is a dislike that seems constitutional toward persons, things, conduct, etc.; hence it involves a dislike for which sometimes no good reason can be given. *Antipathy* is opposed primarily to *sympathy*, but often to mere *liking*. *Disgust* is the loathing, first of physical taste, then of esthetic taste, then of spiritual taste or moral feeling. *Aversion* is a fixed disposition to avoid something which displeases, disturbs, or annoys; as, quiet people have an *aversion* to noise. It is a dislike, settled and generally strong. *Reluctance* and *repugnance* by derivation imply a natural struggle, as of hesitation or recoil; with *reluctance* it is simply the will holding back in dislike of some proposed act, while with *repugnance* it is a greater resistance or one accompanied with greater feeling, and generally in regard to an act, course, idea, etc., rarely to persons or things. See *animosity*.

Originally, the first tine or branch of the horns of a deer.—2. Any of the principal tines or branches of a deer's horns: with a descriptive prefix or epithet. (See below.)—3. Now, when used absolutely, one of the solid deciduous horns of the *Cervida*, or deer family, which are periodically shed and renewed, as distinguished from the permanent hollow horns of other ruminants. Antlers are of all shapes and sizes, from the short simple spikes of some species to the enormous branched or palmate antlers of the stag, elk, or moose. They are secondary sexual organs, developed in connection with the rut, and generally only in the male sex; in some *Cervida*, as reindeer, in both sexes. They consist of a modification of true bone, and are therefore radically different from the cuticular or epidermal structures (horns) of other ruminants. During growth they are covered with a modified periosteal and epidermal tissue, abounding in blood-vessels, and furry outside; this is

Stag's Antler in successive years. a, brow-antler; b, bez-antler; c, antler royal; d, sur-royal, or crown-antler.

the velvet, affording a copious supply of blood to the rapidly enlarging osseous tissue. When the antlers are full-grown the vascular activity of the velvet ceases, a result mechanically facilitated by the development of the boss or bar at the root of the beam, which to some extent strangulates the blood-vessels. The velvet then withers and shrivels, and peels off in shreds, or is rubbed off by the animal. The horns of the American prongbuck are antlers, inasmuch as they are deciduous and grow in the manner just described; but they are cuticular structures, and otherwise like the horns of cattle. In forestry, the tines of much-branched antlers, as those of the stag, have special names. In the first year the stag has only frontal protuberances, called *bossets*; in the second, a simple stem or *stag*, called *spike* in the case of American deer; in the third, a longer stem with one branch, the *brow-antler*; in the fourth, the *bez*, *bez*, or *bay-antler*; in the fifth, the *antler royal* is acquired; after which the ends of the stag's horns become more or less palmate, developing the *crown* or *sur-royal*, whence more or fewer points diverge in subsequent years. The total number of 'points,' counting all the tines, may be ten. The main stem of a branched antler is the *beam*; the branches, exclusive of the mere points of the palmated part, are the *tines*. The order of branching is different in different species; in some the division is dichotomous throughout, as in the mule-deer of America. In general, the tines are offsets of a main beam. The reindeer is remarkable for the great size of the brow-antler, which is also usually much larger on one side than on the other. The most palmate antlers are those of the European elk and of the American moose.

It digs a funnel-shaped hole in the driest and finest sand it can find, working inside the hole and throwing up the particles of sand with its head. aorta (ā-ōr'ā), n.; pl. *aortæ* (-tē). [*NL.*, < *Gr.* *ἀορτή*, aorta, < *ἀείρω*, raise, lift, pass, *ἀείρωμαι*, rise. Cf. *artery*.] In *anat.*, the main trunk of the arterial system, issuing from the left ventricle of the heart, conveying arterialized blood to all parts of the body except the lungs, and

giving rise, directly or indirectly, to all the arteries of the body except the pulmonary. The name is chiefly given to such an artery in those higher vertebrates which have a completely four-chambered heart. The aorta commonly gives off immediately the great vessels of the head, neck, and anterior limbs, and ends by forking to supply the posterior limbs. In the embryo it communicates with the pulmonary artery by a duct (ductus arteriosus), which is normally closed at birth. In man the aorta is divided into *ascending*, *transverse*, and *descending* portions. The *ascending aorta* rises and then curves over to the left, forming the *transverse portion* or *arch* of the aorta, whence spring the innominate and left carotid and left subclavian arteries; it then descends upon and a little to the left of the bodies of the vertebrae, forming the *descending aorta*, divided into the *thoracic aorta* above the diaphragm and the *abdominal aorta* below it; it ends usually opposite the fourth lumbar vertebra by bifurcating into the right and left common iliac arteries. The thoracic branches are numerous, but small and chiefly intercostal; the abdominal branches are the cœliaca, superior and inferior mesenteric, renal, suprarenal, spermatic, and others. The aorta is provided at its beginning with three semilunar valves, which prevent regurgitation of blood into the heart. See *aortic*, and cuts under *circulation*, *embryo*, *heart*, *thorax*.—**Cardiac aorta.** See *extract* below.—**Definitive aorta**, the aorta as defined above.—**Primitive aortæ**, the first and paired main arteries of the embryo, connected with the omphalomesenteric vessels. See *extract*.

The heart of the vertebrate embryo is at first a simple tube, the anterior end of which passes into a cardiac aortic trunk, while the posterior end is continuous with the great veins which bring back blood from the umbilical vesicle. The cardiac aorta immediately divides into two branches, each of which ascends, in the first visceral arch, in the form of a forwardly convex aortic arch, to the under side of the rudimentary spinal column, and then runs parallel with its fellow to the hinder part of the body as a primitive subvertebral aorta. The two primitive aortæ soon coalesce, in the greater part of their length, into one trunk, the definitive subvertebral aorta, but the aortic arches, separated by the alimentary tract, remain distinct.
Huxley, *Anat. Vert.*, p. 90.

aortal (ā-ōr'tal), a. [*aorta* + *-al*.] Same as *aortic*. [Rare.]

aortic (ā-ōr'tik), a. [*aorta* + *-ic*.] Belonging or pertaining to the aorta.—**Aortic arch**, (a) The permanent arch of the aorta. See *aorta*. (b) One of the five or more pairs of arterial arches of the embryo of a vertebrate, formed by forkings of the primitive cardiac aorta, and uniting to form the primitive and finally the definitive subvertebral aorta, or aorta proper. There is a pair of such aortic arches to each pair of visceral arches of the neck. In the higher vertebrates the two anterior pairs disappear; the third pair is modified into the carotid arteries supplying the head; the fourth pair becomes the arteries supplying the anterior limbs and the permanent arch of the aorta—in man, the innominate and right subclavian on the right side, and the left subclavian and arch of the aorta on the left; in the fifth pair in man the right side is obliterated, and the left forms the permanent pulmonary artery, the descending aorta, and the ductus arteriosus, which is the communication between the fifth and the fourth arches. In branchiate vertebrates most of these arches are permanent, becoming the blood-vessels of the gills.—**Aortic bulb**, the enlargement at the beginning of the cardiac aorta.—**Aortic compressor**, in *surg.*, an instrument, used in cases of amputation at the hip-joint, for compressing the aorta, in order to limit the flow of blood from it to the divided femoral artery.—**Aortic orifice**, **aortic aperture**, of the diaphragm, the hole of the diaphragm, between its right and left pillars, through which the aorta passes from the thorax into the abdomen; it also gives transit to an azygos vein.—**Aortic valves**, the three semilunar valves at the origin of the aorta from the left ventricle of the heart, guarding the orifice and preventing regurgitation into the ventricle.—**Aortic vestibule**, the part of the left ventricle adjoining the root of the aorta.

= *Syn.* *Indifference*, *Insensibility*, *Impassibility*, *Apathy*, *Stoicism*, *Unconcern*, *Phlegm*, *Calmness*, torpor, coldness, coolness, unfeelingness, lethargy, immobility. (See list under *indifference*.) *Indifference* denotes absence of feeling, passion, or desire toward a particular object; as, *indifference* to pain or ridicule. *Apathy* commonly implies a general want of feeling, a complete indifference in regard to anything, due to want of interest or attention, as in the case of a repressed or sluggish intellect, or of extreme illness or affliction. *Insensibility* and *impassibility* suggest the lack of capacity for feeling, or an absence of susceptibility, being qualities rather than states of mind. *Indifference* arising from *impassibility* relates more particularly to internal, that arising from *insensibility* to external impressions; the former is, moreover, more profound and radical than the latter. *Indifference* may be an entirely proper state under the circumstances; *insensibility* and *impassibility* are always at least to be pitied; *unconcern* is always and *indifference* sometimes blameworthy, as cold and selfish. *Stoicism* is a studied suppression of feeling, or the concealment especially of painful feeling by force of will. *Unconcern* is absence of solicitude. (See *care*.) *Phlegm* is most suggestive of physical temperament; it is a constitutional dullness or sluggishness, an incapacity of being aroused by anything. *Calmness* is a tranquility resulting from the mastery of the will over passions and feelings that perhaps are strong and keen, and hence is always commendable.

The *aphorism* . . . formulated by Linnaeus in regard to plants. *Quatrefages, Human Species (trans.)*, p. 50.

2. A precept or rule expressed in few words; a detached sentence containing some important truth: as, the *aphorisms* of Hippocrates, or of the civil law.

The three ancient commentators on Hippocrates . . . have given the same definition of an *aphorism*, i. e., "a succinct saying, comprehending a complete statement," or a saying poor in expression, but rich in sentiment. *Fleming.*

= **Syn.** *Aphorism, Axiom, Maxim, Precept, Dictum, Apothegm, Saying, Adage, Proverb, Truth, Byword, Saw*, all concur in expressing a pithy general proposition, usually in one short sentence; but the longer the form the less applicable do these names become. An *aphorism* is a truth, pointedly set forth, relating rather to speculative principles, ethics, or science than to practical matters, and forming a brief and excellent statement of a doctrine: thus, "Moderation is the silken string running through the pearl-chain of all virtues," and "Maladies are cured by nature, not by remedies," are *aphorisms*. "Life is short, and art is long" is from the first *aphorism* of Hippocrates. An *axiom* is a self-evident truth, and is therefore used as a basis for reasoning. "A straight line is the shortest distance between two points" is one of the *axioms* of mathematics; "The greater good is to be chosen before the less" is an *axiom* of morals. The number of axioms is necessarily limited; of *aphorisms*, *maxims*, etc., unlimited. A *maxim* is a truth which, while not so definite and necessarily true as an *axiom*, yet equally acceptable to the mind, refers rather to practical than to abstract truth, stating one of the fundamental rules of conduct, civil government, business policy, and the like; as, it is a sound *maxim* that one should risk in speculation no more than he can afford to lose. It suggests a lesson more pointedly and directly than *aphorism*, and differs from *precept* in that a *precept* is a direct injunction, whereas a *maxim* is a mere statement of a truth from which a *precept* may be deduced. It would be a *precept* to say, "In speculation risk no more than you can afford to lose." A *dictum* is not a *precept*, but an opinion given with authority, as from superior knowledge; as, a *dictum* of the critics; a *dictum* of Carlyle's. An *apothegm*, in common matters what an *aphorism* is in higher, is essentially a terse proposition that makes a vivid impression on the mind: thus, "In the adversity of our best friends we always find something that doth not displease us"; this is called by Dean Swift a *maxim*, but is more properly an *apothegm*. "Heaven helps those that help themselves," and

"He who fights and runs away
May live to fight another day"
(*Goldsmith, Art of Poetry*),

are *apothegms*. A *saying* is a lower grade of *apothegm*; each is likely to be found associated with the name of the author: as, the *apothegms* of Socrates; a *saying* of Poor Richard. Each is a felicitous expression current for its own sake, but deriving additional popularity from the celebrity of its author. "Hercules is that *saying* true, One soweth, and another reapeth," John iv. 37; "The little and short *sayings* of wise and excellent men are of great value, like the dust of gold or the least sparks of the diamond," *Tillotson*. *Adage* and *proverb* are habitual sayings, generally of long standing, embodying the common sense of mankind on ordinary subjects. The *adage* is often the more venerable by age and the more dignified in its character: as, "Necessity knows no law." A *saying* may easily become an *adage*. *Proverb* as used in the Bible is often a *saying*: as, "Physician, heal thyself," Luke iv. 23; but in the mod-

ern sense *proverb* often appears in some concrete figurative and homely form: as, "Too many cooks spoil the broth"; "Every tub must stand on its own bottom." A *truism* is a truth too obvious to need explanation or proof; it is a word of relative application; what would be a *truism* to one might be an *axiom* or an *aphorism* to another. A *byword* is a cant term or phrase, in every one's mouth like a proverb, but applied in disparagement. *Saw* is a contemptuous term for an expression that is more common than wise, or for a trite or foolish saying reiterated to wearisomeness.

Used specifically to denote—(a) in *astro.*, the periodic circulation of a planet, as bringing it back to the point from which it had set out. (b) In *med.*, the restoration which is indicated by the cessation or subsiding of an abscess or a tumor. (c) In *theol.*, the final restitution of all things, in which all the wicked of all time will be fully restored to the favor of God. The doctrine of such a restitution, founded on Acts iii. 21 and other passages of Scripture, has appeared in the Christian church at different times during the past seventeen centuries, and forms an important feature of the creed of modern Universalists. See *restitution*. Also spelled *apokatastasis*.

apocatharsis (ap'ō-ka-thär'sis), n. [NL., < Gr. ἀποκαθάρσις, that which is cleared off, < ἀποκαθαίρειν, clear off, cleanse, < ἀπό, off, & καθάρειν, cleanse: see *cathartic*.] In *med.*, same as *catharsis*. *Dunglison*.

apochromatic (ap'ō-krō-mat'ik), a. [*< Gr. ἀπό, from, & χρώμα(r-), color, + -ic.*] An epithet descriptive of an improved form of lens devised by Professor Abbe of Jena, constructed of new kinds of glass which allow of a more perfect correction of chromatic and spherical aberration than has hitherto been possible. The kinds of glass employed are chiefly remarkable in that their dispersion for different parts of the spectrum is nearly proportional; hence a lens constructed of them is not subject to the limitation of an ordinary achromatic lens of being strictly achromatic for two colors only. Another defect of ordinary lenses, that their spherical aberration is not corrected for all rays, is also largely overcome.

The elimination of these errors realizes an achromatism of higher order than has hitherto been attained. The objectives of this system may be therefore distinguished from achromatic lenses in the old sense of the word by the term *apochromatism*, and may be called *apochromatic* objectives. *Jour. Roy. Microsc. Soc.*, Feb., 1857, p. 23.

apochromatism (ap'ō-krō'ma-tizm), n. [*< apochromatic + -ism.*] The condition of being apochromatic. See *above*.

Specifically—2. *Eccl.*: (a) A name given in the early church to various writings of uncertain origin and authority, regarded by some as inspired, but rejected by most authorities or believers. Such books were either works acknowledged to be useful and edifying, but not established as canonical, or else heretical writings absolutely rejected by the church. (b) [*cap.*] A collection of fourteen books subjoined to the canonical books of the Old Testament in the authorized version of the Bible, as originally issued, but now generally omitted. They do not exist in the Hebrew Bible, but are found with others of the same character scattered through the Septuagint and Vulgate versions of the Old Testament. They are: First and Second Esdras (otherwise Third and Fourth Esdras or Ezra, reckoning Nehemiah as Second Ezra or Esdras), Tobit or Tobias, Judith, the Rest of Esther, Wisdom of Solomon, Ecclesiasticus, Baruch (as joined to Jeremiah), parts of Daniel (namely, Song of the Three Children, the History of Susanna, the Destruction of Bel and the Dragon), the Prayer of Manasses, and First and Second Maccabees. Most of these are recognized by the Roman Catholic Church as fully canonical, though theologians of that church often distinguish them as deuterocanonical, on the ground that their place in the canon was decided later than that of the other books, limiting the name *Apocrypha* to the two (last) books of Esdras and the Prayer of Manasses, and other books not in the above collection, namely, Third and Fourth Maccabees, a book of Enoch, an additional or 151st Psalm of David, and eighteen Psalms of Solomon. With these sometimes are included certain pseudopi-

graphic books, such as the Apocalypse of Baruch and the Assumption of Moses. The name *Apocrypha* is also occasionally made to embrace the Antilegomena of the New Testament. The Greek Church makes no distinction among the books contained in the Septuagint. In the Anglican and Lutheran churches, the *Apocrypha* are read for example of life and instruction of manners, but not for the establishing of any doctrine. See *antilegomena* and *deuterocanonical*.

Apocynaceæ (a-pos-i-nā'sē-ō), *n. pl.* [NL., < *Apocynum* + -aceæ.] A natural order of dicotyledonous plants, having for its type the genus *Apocynum*, or dogbane. It is very nearly allied to the order *Asclepiadaceæ*, from which, however, it is distinguished by the fact that its stamens are free from the style and stigma, and its anthers contain granular pollen. The species are largely tropical, and have a milky juice that is often acrid and sometimes very poisonous. India-rubber is obtained from several species in Africa, India, and South America. The order furnishes woods that are used for carving and furniture, several fiber-plants, barks valuable in medicine, and some edible fruits. It includes the ordeal-tree of Madagascar (*Cerbera manghin*), the milk-tree of Bomerara, the cream-fruit of Sierra Leone, and the periwinkle (*Viola*), oleander (*Nerium oleander*), Cape jasmine (*Rhynchospermum*), and plants of the genus *Allananda* which are cultivated in gardens and greenhouses.

apocynaceous (a-pos-i-nā'shius), *a.* [< NL. *apocynaceus*; see *Apocynaceæ*.] Of or pertaining to the *Apocynaceæ*.

apocynous (ap-ō-sin'ō-us), *a.* [< NL. *apocynus*, < *Apocynum*, q. v.] Same as *apocynaceous*. *Hooker*.

apocynin (a-pos'i-nin), *n.* [< *Apocynum* + -in.] A bitter principle derived from dogbane, *Apocynum cannabinum*.

Apocynum (a-pos'i-num), *n.* [NL., < L. *apocynon*, dogbane (*Aconitum lycoctonum*, Linnaeus), < Gr. ἀπόκωνον, a plant, *Cynanchum erectus*, < ἀπό, from, away, + κώνω (κων), a dog, = E. *hound*.] Dogbane, a genus of perennial herbs, type of the natural order *Apocynaceæ* (which see), and including three species, of which two, *A. androsæmifolium* and *A. cannabinum*, are North American. The common name of the latter is *Indian hemp*, from the use of its fibrous and extremely tough bark by the American Indians for making nets, etc.

apod, **apode** (ap'od, -ōd), *a.* and *n.* [< NL. *apud* (*apod*), < Gr. ἄπους (*apod*), footless, < ἀ-priv-, + πούς (*pod*) = E. *foot*.] I. *a.* Footless; apodal.

(a) As used by Aristotle, the third division of *Zootica*, or air-breathing animals which bring forth their young alive. It included the whales. This probably original use of the word still lingers in some systems. See (b). (b) Those placental mammals which have no feet, as distinguished from the *Pedota* (which see). (c) In *ichth.*, same as *Apodes*. (d) In Cuvier's system of classification, the second order of echinoderms, contrasted with *Pediacellata*. It is a heterogeneous group, consisting of the following genera: *Molpoda*, *Minyas*, *Priapulus*, *Lithodermis*, *Siphunculus*, *Boniella*, *Thalassena*; the first a holothurian, the second a calciferate, the rest gephyreans. (e) With Van der Hoeven, an order of echinoderms. See *Gephyrea*. (f) In Claus's arrangement, an order of holo-

thurians, containing the families *Synaptida* and *Molpudiida*, the last of which constitutes his suborder *Pneumono-phora*. (g) In Macleay's system of classification, a division of *Annelida*, including those which have no feet or distinct head; opposed to *Polygoda*. It is divided into three groups, the *Lumbricina*, *Nemertina*, and *Hirudinea*, or the earthworms, nemertean, and leeches. (h) An order of *Amphibia*, same as *Gymnophiona* or *Ophiomorpha*, constituted by the family *Ceciliida* alone. (i) A group of degraded parasitic ctenipods, having a vermiform body, a suctorial mouth, no thoracic or abdominal limbs (and consequently no cirri), and a rudimentary peduncle represented by two separate threads bearing the characteristic antenniform organs. There is but one genus, *Proteolepas* (which see).

apodal (ap'ō-dal), *a.* [< *apod* or *Apoda* + -al.] Having no feet, or supposed to have none; footless; applied specifically in *zool.* to members of the several groups called *Apoda* or *Apodes*, especially to the fishes so called.

apodema (a-pod'e-mā), *n.*; pl. *apodemata* (ap-dem'a-tā). [NL., < Gr. ἀπό, from, off, + δέμας, body, frame.] A name given to the plates of chitin which pass inward from the integuments of crustaceans, and divide as well as support their internal organs. Also *apodeme*.

apodemal (a-pod'e-mal), *a.* Having the character of an apodema: as, an *apodemal* partition; an *apodemal* chamber. Also *apodematous*.

Apodes (ap'ō-dēz), *n. pl.* [NL., masc. pl. of *apud* (*apod*); see *apod*.] 1. An order of fishes to which very different limits have been assigned. (a) In the classification of Linnaeus (1758), a group of osseous fishes without ventral fins and comprising a heterogeneous assemblage of representatives of various modern orders. (b) In Bloch and Schneider's system (1801), some one of several orders of fishes, the name being repeated under several so-called classes which were distinguished by the number of fins. As thus used, the word was a descriptive rather than a distinctive term. (c) In Cuvier's system, a section of the malacopterygians, the name being applied adjectively to such forms as are destitute of ventral fins. The true eels, sibranchiate eels, *Gymnopteri*, typical *Ophidioidea*, and *Amnodytoidea* were referred to this group. (d) By various later writers the name was used as a distinctive ordinal name. By T. Müller the *Ophidioidea* and *Amnodytoidea* were eliminated. By Gill, in 1861, the order was restricted to the typical and sibranchiate eels, and later (1884) to the true eels, or teleost fishes with the intermaxillaries atrophied or lost, the supermaxillaries lateral, and the body anguilliform and destitute of ventral fins. These characters are correlated with various others which justify the isolation. The principal families are the *Anguillida*, *Ophichthyida*, and *Muraenida*.

2. In De Blainville's system of classification, a division of his *Entomozoaria*; the apodal, as distinguished from the chaetopod, entomozoans. It includes the leeches, and is approximately equivalent to the *Hirudinea* of modern naturalists, but contains many intestinal worms.

Apodia (a-pod'i-ā), *n. pl.* [NL., < Gr. ἄπους (*apod*), without feet; see *apod*.] In Gegenbaur's system of classification, one of two divisions of *Holothuroida* (the other being *Eupodia*), established for the reception of the genus *Synapta* and allied forms.

Demonstrative; incontestable because demonstrated or demonstrable; of the nature of necessary proof.

The argumentation is from a similitude, therefore not *apodictic*, or of evident demonstration. *Dr. J. Robinson*, *Eudoxa* (1658), p. 23.

There is one character which will be considered decisive, and that is the *apodictic* certainty belonging to mathematical conclusions. *G. H. Leves*, *Probs. of Life and Mind*, I. i. § 202.

2. In *logic*, a term descriptive of a form of judgment in which the connection of subject and predicate is asserted to be necessary; asserting its own necessity. Thus, "Two spheres

whose centers are distant from each other by less than the sum of their radii must intersect" would be an *apodictic* judgment. Such judgments may be false. This use of the word appears to have originated with Kant.

II. n. The logical doctrine of demonstration and of science.

Apodictic, we may assume, is in like manner the formal study of what constitutes knowledge strictly so called, the nature of the principles on which knowledge rests, the special marks distinguishing it, and the method by which knowledge is framed.

R. Adamson, *Encyc. Brit.*, XIV, 785.

apodictical, apodeictical (ap-ō-dik'ti-kal, -dik'ti-kal), *a.* Same as *apodictic, apodictive*.

apodictically, apodeictically (ap-ō-dik'ti-kal-i, -dik'ti-kal-i), *adv.* 1. Demonstratively; so as to be evident beyond contradiction.

Kant's marvellous acuteness did not prevent his transcending from being *apodictically* resolved into absolute idealism.

Sir W. Hamilton.

Apodictically, we should say, if α is the cause of β , then all A which possesses α possesses β ; thus reasoning from cause to causatum. R. Adamson, *Encyc. Brit.*, XIV, 789.

2. By, or in the manner of, an apodictic judgment. See *apodictic*, 2.

apodid (a-pod'id), *n.* A member of the family *Apollide*.

apodixis, apodeixis (ap-ō-dik'sis, -dik'sis), *n.* [< L. *apodixis*, < Gr. *ἀποδείξις*, demonstration, proof, < *ἀποδεικνύω*, demonstrate: see *apodictic*.] Full demonstration; absolute proof.

This might taste of a desperate will, if he had not afterwards given an *apodixis*, in the battle, upon what platform he had projected and raised that hope.

Sir G. Buck, *Hist. Rich.* III., p. 60.

apodon (ap'ō-don), *n.* An improper form of *apodum*.

apodosis (a-pod'ō-sis), *n.* [L., < Gr. *ἀπόδοσις*, a giving back, return, answering clause, < *ἀποδοῦναι*, give back, < *ἀπό*, from, away, + *δίδωμι*, give, = L. *dare*, give. Cf. *dose*.] 1. In *gram.*, the concluding part of a conditional sentence; the consequent which results from or is dependent on the protasis, or condition; and the conclusion. Thus, in the sentence, If it rains, I shall not go, the first clause is the *protasis*, the second the *apodosis*. When the protasis is introduced by such conditional conjunctions as *notwithstanding, though, although*, the *apodosis* predicates something opposite to what might have been looked for: as, Although we were few in numbers (*protasis*), we overthrew the enemy (*apodosis*). By some grammarians the term is not restricted to conditional sentences, but is extended to others similarly constructed: thus, in a simile the *apodosis* is the application or latter part.

2. In the *Gr. Ch.*, the last day of a church festival when prolonged throughout several days. It is sometimes coincident with or later than the octave, but generally earlier.

apodous (ap'ō-dus), *a.* [< *apod* + *-ous*.] Footless; apodal.

Thy sun in his *apogæon* placed.

Fairfax, tr. of Tasso, ii, 67.

It is not yet agreed in what time, precisely, the *apogæum* absolveth one degree.

Sir T. Browne, *Vulg. Err.*

The author could not detect any act of impregnation in a parasite on the olive, and believes that reproduction is *apogamic*.

Jour. Roy. Micros. Soc., 24 ser., VI, 298.

apogamous (a-pog'a-mus), *a.* [< NL. *apogamus*, < Gr. *ἀπό*, away from, + *γάμος*, marriage.] In *bot.*, of the nature of or characterized by apogamy.

De Bary thinks that in forms where oögonia are found without male pollenidia they must be considered as representing a distinct *apogamous* species.

Smithsonian Rep., 1881, p. 403.

apogamously (a-pog'a-mus-li), *adv.* In an apogamous manner; by apogamy.

Those [spores] which are formed probably or actually without a sexual process—in a word, *apogamously*—but

which may be considered . . . to be homologous with those which are actually sexually produced.

Encyc. Brit., XX, 431.

apogamy (a-pog'a-mi), *n.* [< NL. *apogamia*, < *apogamus*: see *apogamous*.] In *bot.*: (a) Generally, the absence of sexual reproductive power, the plant perpetuating itself only by vegetative means, as buds, bulbs, etc. (b) In the higher cryptogams, the immediate development of the perfect plant from the prothallus without the usual intervention of sexual organs.

apogee (ap'ō-jē), *n.* [< ML. NL. *apogæum, apogæum, apogæon, apogæon*, < Gr. *ἀπόγειον, ὀπίγειον* (se. *διάστημα*, distance), a planet's greatest distance from the earth, neut. of *ἀπόγειος, ὀπίγειος*, from the land, from the earth (> L. *apogeus*, from the land); < *ἀπό*, from, + *γῆ*, poet. *γῆα*, earth, land: see *geography*, etc.] 1. That point in the orbit of a planet or other heavenly body which is at the greatest distance from the earth; especially, that particular point of the moon's orbit. The ancients regarded the earth as fixed in the center of the universe, and accordingly assigned to the sun, with the planets, an apogee; but now that the sun is recognized as the center of our system, the terms *perihelion* and *aphelion* are employed to denote the least and greatest distance of the planets from that orb. Strictly, therefore, the sun is in its apogee when the earth is in its aphelion. In the Ptolemaic astronomy, the *mean* apogee of the epicycle is the point of the epicycle furthest from the center of the equant; the *true* apogee of the epicycle is that point of it furthest from the earth; and the *fixed* apogee of the epicycle is that point of it furthest from the center of the eccentric.

2. Figuratively, the highest or most distant point; climax; culmination.

It [Bruges] had by no means reached its *apogee*, but was to culminate with Venice. *Motley*, *Dutch Republic*, I, 37.

apogeeic (ap-ō-jē'ik), *a.* [As *apogee* + *-ic*.] Same as *apogean*.

apogeotropic (ap'ō-jē-ō-trop'ik), *a.* [< NL. *apogeotropicus*, < Gr. *ἀπόγειος, ὀπίγειος*, from the earth, + *-τροπικός*, turning: see *apogee* and *tropic*.] In *bot.*, characterized by apogeotropism: shooting upward; inclined to turn away from the ground.

The sheath-like cotyledons, whilst young, are strongly *apogeotropic*.

In *Gr.* and later in *Rom. myth.*, one of the great Olympian gods, the son of Zeus (Jupiter) and Leto (Latona), representing the light- and life-giving influence, as well as the deadly power, of the sun, and often identified with the sun-god, Helios. He was the leader of the Muses, god of music, poetry, and healing, and patron of these arts; a mighty protector from evil, all-seeing, and hence the master of prophecy; also the destroyer of the unjust and insolent, and ruler of pestilence. In art he was represented in the full majesty of youthful manhood, in most of his attributions unclothed or but lightly draped, and usually characterized by the bow and arrows, the laurel, the lyre, the oracular tripod, the serpent, or the dol-

phin. He was the father of Esculapius, to whom he granted his art of healing. Apollo was honored, both locally and generally, under many special titles, of which each had its particular type in art and literature: as,

=**Syn.** 2. *Apology, Excuse, Plea.* *Apology* has in this sense the force of an admission that one has been, at least seemingly, in the wrong; it therefore pleads any extenuating circumstances, or, more often, offers a frank acknowledgment as the best that can be done toward making matters right. *Excuse* may mean a defense, or an explanation simply: as, his *excuse* was quite sufficient; or it may be a mere attempt at justification: as, it was only an *excuse*; or it may be a begging to be released from a claim: as, "they all with one consent began to make *excuse*," Luke xv. 18. A *plea* consists, according to the occasion, of an appeal for leniency, or of justificatory or exculpatory argument or persuasion.

Our English Martyrologer counted it a sufficient *apology* for what meanness might be found in the first edition of his "*Acts and Monuments*," that it was "hastily rashed up in about fourteen months."

In modern usage an appeal implies not merely a preliminary objection, but a proceeding for review after a decision has been rendered. As now used, it is a proceeding derived from the courts of equity. The mode of review at common law was formerly not to remove the cause, but only to bring up specific points or questions by writs of error. This was changed in England by the judicature acts of 1873-5, and there is now one Court of Appeal for all cases. In Scotland the highest appellate court is the Court of Session. The judgments of both these courts may be appealed to the House of Lords. In the United States the appeal has been to a great extent substituted for the writ of error. The highest appellate courts are, for federal questions arising in either federal or State courts, the United States Supreme Court; for other questions, the supreme courts, courts of appeal, or courts of error of the various States, the practice being wholly regulated by statutes. (c) The

mode of procedure by which such removal is effected. (d) The right of removal to a higher court. (e) Formerly, a vindictive action at the suit of a party injured when the supposed criminal had been previously acquitted on an indictment or pardoned. The appellant raised an action (which had to be brought within a year) and demanded the punishment of the accused, who had to submit to a fresh trial by jury, or demand a trial by wager of battle.

To prize is to value highly, generally for other than pecuniary reasons, and suggesting the notion of reluctance to lose. Thus, we prize a book for its contents or associations; we prize a friend for his affection for us. To esteem is sometimes simply to think: as, I esteem him a scoundrel; sometimes to value: as, I esteem it highly; sometimes to have a high opinion of or set a high value on: as, I esteem him for his own sake; in its highest sense it implies moral approbation. Estimating is an act of computation or judgment, and wholly without feeling or moral approbation: as, to estimate the size of a room, the weight of a stone, the literary excellence of a book, the character of a person. (See esteem, n., for comparison of corresponding nouns.) Appreciate is to set a just value on; it implies the use of wise judgment or delicate perception: as, he appreciated the quality of the work. With this perception naturally goes a corresponding intellectual valuation and moral esteem: as, they knew how to appreciate his worth. Appreciate often implies also that the thing appreciated is likely to be overlooked or underestimated. It is commonly used of good things: as, I understood his wickedness; I realized or recognized his folly; I appreciated his virtue or wisdom. Compare such phrases as an appreciative audience, a few appreciative words, appreciation of merit.

a priori (ā pri-ō'ri). [*<* L. from something prior or going before: *ā* for *ab*, from; *priori*, abl. of *prior*, neut. *prius*, preceding: see *prior*, *a.*] From the former; from that which precedes; hence, from antecedent to consequent, from condition to conditioned, or from cause to effect. Since the fourteenth century, the phrase *demonstratio a priori* (first found in Albert of Saxony, died 1300) has been commonly employed, instead of the earlier expression *demonstratio propter quod*, to mean proof proceeding from causes or first principles; opposed to *demonstratio a posteriori*, or *demonstratio quia*, which proceeds from effect to cause, and simply proves the fact without showing why it must be as it is. In the eighteenth century *demonstratio a priori* was applied to reasoning from a given notion to the conditions which such notion involves. But since Kant, *a priori*, used as an adjective and frequently placed before the noun, has been applied to cognitions which, though they may come to us in experience, have their origin in the nature of the mind, and are independent of experience.

Demonstration is perfect, when it proceedeth from the proper cause to the effect, called of the scholemen, *a priori*. *Blundeville, Arte of Logicke* (1599), vi. 19.

Thus when we argue from the ideas we have of immensity, eternity, necessary existence, and the like, that such perfections can reside but in one being, and thence conclude that there can be but one supreme God, . . . this is an argument *a priori*. *Clarke*.

General truths, which at the same time bear the character of an inward necessity, must be independent of experience—clear and certain by themselves. They are therefore called *a priori*, while that which is simply taken from experience is said to be, in ordinary parlance, known *a posteriori* or empirically only.

Kant, Critique of Pure Reason, tr. by Max Müller.

As used in a psychological sense, knowledge *a posteriori* is a synonym for knowledge empirical, or from experience; and, consequently, is adventitious to the mind, as subsequent to, and in consequence of, the exercise of its faculties of observation. Knowledge *a priori*, on the contrary, called likewise native, pure, or transcendental knowledge, embraces those principles which, as the condition of the exercise of its faculties of observation and thought, are, consequently, not the result of that exercise. True it is that, chronologically considered, our *a priori* is not antecedent to our *a posteriori* knowledge; for the internal conditions of experience can only operate when an object of experience has been presented. *Sir W. Hamilton*.

sanctuary of any church, particularly if it presents a superficial resemblance to an apse in the stricter sense, in that it is at least approximately semicircular in plan, and vaulted: commonly equivalent to *chevet*, and applied to the altar extremity of a church, even if of rectangular plan and not vaulted, and including the apse-aisles, chapels, and any other adjunct to the ritual east end of a church. The apse in its origin was a characteristic feature of the ancient Roman basilica, in which it formed the raised tribune for the court magistrates. The throne of the quaestor or presiding judge stood in the center of the chord of the arc of the apse. When the basilicas became Christian churches, the throne was replaced by the high altar, which still occupies this position in Latin churches of the strict basilica type, and has regularly kept it in Oriental churches. Some types of church regularly have secondary apses in other positions than at the eastern end, as at the western end, at the extremities of the transepts or of aisles, etc. See *cuts under basilica* and *berna*. Also *apsis*.

Apsidal chapel. (a) A chapel terminating in an apse. (b) An apse-chapel.—**Apsidal surface**, in *math.*, a surface related to any other surface and to any point as Fresnel's wave-surface is related to the quadric surface and to its center; that is to say, on each plane section of an original surface through a certain fixed point the radii from that point which cut the section orthogonally are taken, and distances equal to these radii are measured off from the fixed point on the perpendicular to the section; then the locus of the extremities of these lines so measured is the apsidal surface.

The *higher apsis* is the point furthest from, and the *lower apsis* the point nearest to, the central body. The *line of apsides* is the line joining the apsides. =*Syn.* 1. *Apt, Fit.* "The words *apt* and *fit* might be thought to differ only in this, that the former is of Latin derivation; but *apt* has an active sense, and *fit* a passive sense,—a distinction clearly shown by Shakespeare, when the poisoner in the play in Hamlet says, 'hands *apt*, drugs *fit*,' and by Wordsworth: 'Our hearts more *apt* to sympathize with heaven, our souls more *fit* for future glory.'" *H. Reed*, Eng. Lit., p. 106.—2. *Meet, fitting, germane, appropriate.*—3 and 4. *Apt, Likely, Liable, Subject, prone.* *Apt*, when used in this sense of persons, indicates physical tendency or inward inclination; as, *apt* to catch cold; *apt* to neglect work; when used of things, it similarly indicates natural tendency; as, *apt* to mold. *Likely* may suggest the same idea; as, he is *likely* to do it; it is *likely* to rust; or it may express mere external probability or chance; as, he is *likely* to come at any moment. *Liable* in this connection is properly used only of exposure to evil, being practically equivalent to exposed, or exposed to the danger of; as, *liable* to accident; *liable* to be hurt, that is, exposed to the danger of being hurt; *liable* to censure; in such use it does not express probability or tendency, but merely the possibility of exposure or risk. *Subject* expresses what is likely to happen to a person or thing, and occasionally does happen. *Liable* to disease and *subject* to disease thus convey different ideas. The things to which we are *liable* are determined more by accident or circumstance; the things to which we are *subject* are determined by nature and constitution. *Apt* to be suddenly ill; *liable*, but not *likely*, to die before the physician arrives; *subject* to attacks of epilepsy.

How *apt* the poor are to be proud! *Shak.*, T. N., iii. 1.

The name has been loosely applied to eagles and other large diurnal raptorial birds which have no tooth of the beak. It is now restricted and somewhat definitely applied to eagles having hooked tarsi, that is, having the shank more or less completely feathered. Such are the golden eagle, *A. chrysaetus*, of Europe and North America; the spotted eagle, *A. nevia*, of Asia and Europe; the imperial eagle, *A. heliaca*, of the same region; the Russian eagle, *A. mogilnik*, etc. See cut under *eagle*.

2. A northern constellation situated in the Milky Way, nearly south of Lyra, and containing the bright star Altair. It has for its outline the figure of a flying eagle carrying in its talons the boy Antinous, the page of the emperor Hadrian. See cut, p. 284.

3. [*l. c.*; pl. *aquila* (-lê).] A reading-desk in the form of an eagle.

Inflorescence of *Aquilegia vulgaris* (garden columbine). *a*, flower; *b*, same, cut vertically; *c*, petals.

der *Ranunculacea*, widely distributed over the temperate parts of the northern hemisphere. The flowers have five flat, elliptical, colored sepals, alternating with as many spurred petals; the fruit consists of five follicles with numerous seeds. The spurred petals with incurved heads have been compared to five pigeons, the sepals representing the wings, and to this the English name *columbine* refers (from Latin *columba*, a pigeon). Several species are common in cultivation, and, as they are prone to sport and hybridize, the varieties of form and color are numerous. There are 10 North American species, in some of which, from the Rocky Mountains and Mexico, the spurs are several inches in length.

Aquilinæ (ak-wi-lî'nô), *n. pl.* [*NL. < Aquila + -inæ. Cf. aquiline.*] A conventional subfamily of *Falconidæ*, containing eagles. It has no assignable technical characters. See *Aquila*, 1.

and the ocean. Augustus extended it as a Roman province northward to the Loire. It afterward became the Frankish and French duchy (and for some time kingdom) of Aquitaine (held as an appanage of the English crown through intermarriage for about 300 years before 1453), and finally, greatly reduced, the French province of Guienne (a medieval corruption of *Aquitaine*).

It contains such species as the diving water-spider, *Argyroneta aquatica*. So called because they spin their webs in the water. See cut under *Argyroneta*.

aquocapsulitis (ä'kwô-cap-sû-lî'tis), *n.* [*NL.*, < *L. aqua*, water, fluid, + *capsula*, box, + *-itis*; see *aqua* and *capsule*.] Inflammation of the linings of the anterior and posterior chambers of the eye.

aquometer (ä-kwom'ô-têr), *n.* [The analogical *L. form* would be **aquimeter*, < *aqua*, water, + *metron*, measure. Cf. *aquimeter*.] A steam-pump which acts both by direct steam-pressure and by vacuum. It has two working chambers, into which steam is alternately admitted. By the condensation of the steam a partial vacuum is formed, to fill which water rushes in. When the chamber is full of water a valve opens, and steam enters and forces the water out into a pressure- or delivery-chamber. The steam condenses as before, causing the inflow of a further supply of water. One chamber is filling while its companion is discharging, thus keeping up a continuous delivery. See *pulsometer* and *vacuum-pump*.

We do not assume that a something called *aqueosity* entered into and took possession of the oxide of hydrogen as soon as it was formed, and then guided the aqueous particles to their places in the facets of the crystal, or among the leaflets of the hoar-frost.
Huxley, Lay Sermons, p. 136.

Life is thus only an abstraction from the properties of living things, just as *aqueosity* would be an abstraction from the properties of water. *New Princeton Rev.*, II. 71.

2. The state of being aqueose or watery; moisture.

aquila (ak'wô-lî), *n.* [*L.*, also *aquila*, *acula*, a little water, a little stream, dim. of *aqua*, water; see *aqua*.] In *anat.*, a small collection of watery fluid.—*Aquila acustica*, the auditory fluid, the endolymph or perilymph of the labyrinth of the ear.

II. n. 1. A kind of ornament of a capricious and fanciful character, consisting of lines, geometrical figures, fruits, flowers, foliage, etc., variously combined and grouped, and painted, inlaid, or wrought in low relief; used especially for the decoration of walls and ceilings, but also for the decoration of objects of any nature. In the arabesques of the Mohammedans animal forms were rigidly excluded, in accordance with the requirements of their religious law; but the Greeks and Romans, and the Renaissance artists, among them Raphael and his scholars, to whom are due the rich arabesque decorations of the loggie of the Vatican, laid all the kingdoms of nature under contribution. The Greeks undoubtedly derived the idea of pictorial or plastic ornament of this kind from the Oriental stuffs, painted, woven, or embroidered with natural or fabulous forms of plants and animals, which were brought to them by Phœnician traders from a very early period.

2. In bookbinding, a term used in England for impressed ornamental work on the side of the binding, produced by the pressure of hot plates or rollers upon which the pattern is engraved.

II. n. 1. A native of Arabia; an Arab.—**2.** One of a Christian sect of the third century (commonly called *Arabici*) which sprang up in Perea, beyond the Jordan, a region often included in Arabia. According to Eusebius, its members "asserted that the human soul, as long as the present state of the world existed, perished with the body, but that it would be raised again with the body at the time of the resurrection." The point was discussed with them by Origen, at a council, with so much force that they were led to change their opinions.

styles of architecture, but applied especially to Egyptian and Oriental examples. This architecture shows in its systems of construction and ornament the profound influence of Persian and Byzantine models, though, as a rule, in architectural science it falls far behind the work of the Byzantine masters. The ovoideconical dome supported on pendentives is a characteristic feature; the buildings are usually square or polygonal in plan, seldom circular; the roofs are in general flat, and supported by arches resting on columns forming long parallel aisles, and often surrounding a central court. The arches are very commonly of the horseshoe shape developed in Persia, and from the beginning show the pointed form, though it is clear that neither form was adopted for constructive reasons, and that neither influenced the methods of building, much less revolutionized the entire art of architecture, as did the adoption of the pointed arch in western Europe. Walls, particularly interior walls, ceilings, domes, spandrels, etc., are commonly covered with an intricate lacework of arabesques, usually executed in relief on stucco, and often colored with at once great brilliancy and great delicacy. The most noteworthy examples of the style exist in Cairo.—**Arabic figures or characters**, the numeral characters 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, so called as having been introduced into European from Arab use. They were so introduced in the twelfth century, and the work of Leonardo of Pisa, published in 1202, contributed much to their dissemination. They were taken from the Arabic work of Al-Khowarazmi (see *algorism*), who obtained them in India or Afghanistan. The system in its complete form (with the cipher) certainly originated in India; but what the ultimate origin of the characters was, whether they had been previously known in Europe without the cipher, and their history among the Arabians, are matters still in dispute.

II. n. The language of the Arabians; a Semitic dialect, belonging (along with the Himyaritic and Abyssinian languages) to the southern branch of the Semitic family, and generally regarded as exhibiting more ancient features than any other Semitic tongue. It is the language of the Koran, the sacred language of Islam, and possesses an immense literature, almost wholly Moslem and later than the time of Mohammed. Many other languages have borrowed largely of its material, from the Persian, Turkish, Hindustani, and Malay on the east to the Spanish on the west.

The prevailing color of their plumage is green, often varied with spaces or bands of black, or of brilliant red and yellow. They are natives of the warm parts of South America.

2. In ornith., the specific name of one of the aracaris, *Pteroglossus aracari*. It was made a generic name by Lesson in 1828, and was Latinized as *Aracarius* by Rafinesque in 1815.

arace (ar-ā), *v. t.* Same as *arace*. **Araceæ** (ā-rā'sē-ē), *n. pl.* [*NL., < Arum + -aceæ.*] A natural order of monocotyledonous plants, of which the genus *Arum* is the type.

The species are herbaceous perennials, mostly caulescent from tuberous or creeping roots, but in the tropics often tall rooting climbers. The inconspicuous flowers, usually monocious or dioecious, are crowded upon a spadix surrounded by a spathe, with which it is sometimes confluent. The order includes 98 genera and about 1,000 species, abundant within the tropics, but comparatively rare in temperate regions. The larger genera are *Anthurium*, *Philodendron*, *Arisarima*, and *Pothos*. In temperate North America there are 10 species, belonging to 8 genera, of which the most common is the Jack-in-the-pulpit, or Indian turnip, *Arisarima triphyllum*. The skunk-cabbage, *Symplocarpus foetidus*, and the sweet-flag, *Acorus calamus*, are also well-known representatives of the order. The tuberous roots of many species abound in starch, and furnish a wholesome food when cooked, or after the acidity has been removed by washing, as in the taro, *Colocasia antiquorum*, which is extensively cultivated in tropical countries. British or Portland arrowroot is manufactured from the roots of *Arum maculatum* (the wake-robin or cuckoo-pint), the species of which are natives chiefly of tropical countries. A principle of acidity generally pervades the *Araceæ*, existing in so strong a degree in some as to render them dangerous poisons, as *Dioscorea* *scipina* of the West Indies and South America, which receives its popular name *dumb-cane* from the fact that when it is chewed the tongue becomes swelled by the acrid juice, and the power of speech is destroyed. Many species are cultivated in greenhouses, chiefly as foliage-plants, and

Arachis (ar'ā-kis), *n.* [NL., < Gr. *ἀραχίς*, *ἀρακος*, *ἀρακίς*, some leguminous plant.] A small genus of leguminous plants, natives of Brazil. The genus is remarkable in the order for its elongated pedicel-like calyx-tube, and for the manner in which the growing stipe of the ovary bends downward and, attaining a length of 2 or 3 inches, pushes the ovary into the ground, where it begins to enlarge and ripen. The best-known species is *A. hypogæa*, the common peanut or groundnut, which is now cultivated in most warm climates, and is esteemed a valuable article of food. Its pod when mature is oblong, often contracted in the middle, wrinkled, of a pale-yellow color, and contains two seeds of the size of a hazel-nut, sweet in flavor, especially when

Arachnida (a-rak'ni-dā), *n. pl.* [NL., < Gr. *ἀράχνη*, a spider (see *Aranea*), + *-ida*.] In *zool.*, a class name used with varying signification. (a) In Lamarck's and Latreille's systems of classification, one of three classes into which the Linnean *Insecta* were divided, the other two being *Crustacea* and *Insecta*; primarily divided into *Pulmonaria* and *Trachearia*. (b) In Latreille's system, the second class of articulated animals with articulated legs, apterous and ametabolous. It was divided into two orders, *Pulmonaria* and *Trachearia*, the former containing the spiders and scorpions, the latter the false scorpions, harvestmen, and mites. (c) A class of the phylum *Arthropoda*, including the spiders, scorpions, false scorpions, harvestmen, and mites, with or without the bear-animalcules and the *Pycnogonida* and *Pentastomida*. They are apterous, ametabolous, articulate animals, with articulated legs. They are deceaseful by the blending of the head with the thorax as a cephalothorax, normally bearing 8 legs, and never more; the antennæ are transformed into chelicæ when present; the abdomen is usually distinct but not segmented, or if segmented is not distinctly separated from the cephalothorax, and does not bear limbs, the appendages being in the higher forms transformed into spinnerets; the eyes are simple and generally more than two in number; the respiratory apparatus is pulmonary or tracheal, or compounded of these two forms; and their mode of progression is digitigrade. There are about 4,500 species, some of which are fossils occurring in the Silurian and Carboniferous. They are now divided into from six to nine orders. Huxley makes six: *Arthrognatha*, *Aracina*, *Acarina*, *Arctisca*, *Pycnogonida*, *Pentastomida*. Pallas makes nine: *Scorpioidea*, *Cheliferidea*, *Acaridea*, *Aracnoidea*, *Phalangidea*, *Phryniidea*, *Solypigidea*, *Arctisca*, *Pentastomidea* (without *Pycnogonida*). Synonymous with *Acapha*, 3, and *Acera*, 2.

Numberless minute glands, provided with separate ducts, secrete the viscid material which hardens into silk when exposed to the air. The glands have been divided into five kinds: aciniform, ampullate, aggregate, tubuliform, and tuberosus. Their ducts enter the arachnidial mammillæ, and discharge through orifices in the arachnidial papillæ.

II. n. 1. A kind of fossil madreporæ. — *2.* In *anat.*, the serous membrane enveloping the brain and spinal cord; the middle one of the three cerebrospinal meninges, between the dura mater and the pia mater. It was formerly regarded as consisting of two layers, a visceral layer investing the pia mater and a reflected parietal layer lining the dura mater, the two constituting a shut sac, like other serous membranes, inclosing a cavity called the arachnoid cavity, containing a serous fluid, the arachnoid fluid; but the more modern view regards the arachnoid membrane as a single sheet external to the pia mater and attached to it, but not following it into the sulci and other depressions of the brain. What was formerly called the cavity of the arachnoid is now termed the subdural space. The arachnoid is by some regarded as simply the outermost layer of the pia mater. The abdomen is not segmented, and is distinctly separated from the cephalothorax; they have no antennæ, as such, but a pair of palps; they have from 2 to 8 simple eyes, and 8 legs of 7 joints each. The abdominal appendages are modified into an arachnidium or spinneret, the apparatus by which cobweb, gossamer, and other kinds of spider-silk are spun from a secretion of glandular organs. There are also always poison-glands connected with the mouth-parts. The division of the group varies with every leading writer as to number of suborders or families and their arrangement, some admitting but two

or three families, others several suborders and upward of twenty families, while the diversities of detail are endless. The bow was made of steel, horn, or other material, and was of such great strength and stiffness that some mechanical appliance was used to bend it and adjust the string to the notch. The lighter arbalists, used in the chase, and generally by horsemen, required a double hook, which the arbalister carried at his girdle. Heavier ones required a kind of lever, or a windlass, or a revolving winch with a ratchet and long handle, to draw them; these appliances were separate from the arbalist, and were carried slung from the shoulder or at the belt. The short and heavy arrow of the arbalist was called a *quarrel*, from its square head, or more commonly a *bolt*, as distinguished from the *shaft* discharged by the longbow. Sometimes stones (see *stone-bow*) and leaden balls were used. The missile of the arbalist was discharged with such force as to penetrate ordinary armor, and the weapon was considered so deadly as to be prohibited by a council of the church except in warfare against infidels. It could, however, be discharged only twice a minute. It was used especially in the attack and defense of fortified places. For similar weapons of other periods than the European middle ages, see *crossbow*. Also *arcubalist*, and formerly *arblast*.

arbitration (är-bi-trä'shön), *n.* [*ME. arbitracio*, < *OF. arbitratio* = *Pr. arbitracio*, < *L. arbitratio* (*n.*), < *arbitrari*, arbitrate, judge; see *arbitrate*.] The hearing and determining of a cause between parties in controversy by a person or persons chosen or agreed to by the parties. This may be done by one person, but it is usual to choose more than one. Frequently two are nominated, one by each party, the two being authorized in turn to agree upon a third, who is called the umpire (or, in Scotland, sometimes the *oversman*), and who either acts with them or is called on to decide in case the primary arbitrators differ. The determination of arbitrators or umpires is called an *award*. By the common law an award properly made is binding; but the arbitrators' authority may be revoked before award at the will of either party. Permanent boards of arbitration are sometimes constituted by legislative or corporate authority, but the submission of cases to their decision is always voluntary.
